Dear Ms. Carrig:

Re: Validated Data for Himco Dump  
Superfund Site, Elkhart, IN

Enclosed please find the validated results for the Himco dump inorganic data set per your request. If you have any questions regarding the data or the validation, please feel free to call me at (317) 233-2823.

Sincerely,

Jessica R. Huxhold, Project Manager  
Federal Programs Section  
Office of Land Quality

OFFICE MEMORANDUM

Date: November 17, 2000

To: Jessica Huxhold  
Federal Programs Section

Thru: Fran Metcalfe  
Steve Buckel

*JH 11/17/2000*  
*FR for SB 11/17/00*

From: Sandra Roberts  
OLQ Chemistry Section

Subject: Analytical Results for Himco Dump  
Elkhart County, Elkhart, Indiana  
Site # 7500044

Sampled: March 15 and 16, 2000, April 17, 18, 19, 25, 26, 27, and 28, 2000  
and May 1, 2, and 3, 2000

Tested by Region 5 Central Regional Laboratories in Chicago, Illinois

The analytical data and results from "Data Submittal for the March/April 2000 Groundwater Sampling Event for Himco Dump have been validated according to the quality criteria contained in Test Methods for Evaluated Solid Waste, Physical/Chemical Methods, SW-846, Third Edition, Final Updates 1, 2, 2a, and 3, and EPA Drinking Water Standards, 1996. Based on the evaluation, it has been determined that the results are acceptable for use. Reasons that data are qualified as estimated or unusable are explained below. This memorandum should remain attached to the original laboratory reports for reference.

General Comments:

The purpose of this event was to sample in the groundwater at the Himco Dump. The collected samples were analyzed for total metals, and the general chemistry parameters, sulfate and bromide. Sample set 2000SY03S01 thru S11 was tested for general chemistry parameters only. Sample set 2000SY01S01 thru S14 was tested for total metals only. Samples set 2000SY04S14 thru S39, 2000SY04S40 thru S58, and 2000SY04S01 thru S13 were tested for total metals and general chemistry parameters.

Sampling Quality Assurance/Quality Control:

Field documentation included only the chain-of-custody with the field locations in terms of monitoring well identifications and residential water well addresses. Therefore, no site

interpretation or evaluation can be made.

Field duplicate samples are used to establish the representativeness of field sampling (i.e., the homogeneity and sample variability). For sample set 20000SY04S14 thru S39, no interpretation could be made since no field information was provided with the data. For sample set 20000SY01S01 thru S14, the groundwater duplicate sample results are considered in good agreement. In sample set 20000SY04S40 thru S58, the groundwater results for barium, calcium, iron, magnesium, manganese, potassium, sodium, and sulfate are considered estimated due to poor agreement in sample duplicate results of WT116A and WT114A. For sample set 2000SY04S01 thru S13, the groundwater duplicate sample results for potassium and zinc in groundwater are considered estimated due to poor agreement. No field duplicate samples were collected for the 2000SY03S01 through S11 sample set for bromide and sulfate of the 3/15/00 and 3/16/00 sampling events and therefore, the results are considered estimated. Since the samples were not tested for total suspended solids, no interpretation can be made regarding possible contributions to the poor duplication in the above water samples. Also, no field sampling information further complicates the interpretation process.

Field blanks (trip and/or equipment) are used to identify sample contamination resulting from sampling equipment, sample containers, chemical preservatives, and the handling and transportation of samples. No trip blanks are required since no volatile organic constituents were on the parameter list. No equipment blank results were reported. Note that the Himco Supplemental Ground Water Investigation Field Sampling Plan (FSP) indicates that quality control samples will include an equipment blank and the equipment blank will be collected after the last monitoring well has been sampled. If nondedicated equipment that is listed in the Himco FSP was used to collect the samples, the results will possibly reflect cross-contamination and biased high results.

#### Laboratory Quality Assurance/Quality Control:

The laboratory performed all quality assurance/quality control (QA/QC) measures necessary to validate the analytical results for this sampling event. According to the Himco Supplemental Ground Water Investigation Field Sampling Plan/Quality Assurance Project Plan, the SW-846 methods were referenced for sample analysis. Based on the SW-846 quality assurance/control criteria, the data is considered acceptable for use.

Based on the validation of the analytical results, the following specific comments and/or qualifications made regarding the data:

#### **Metals Analysis**

Groundwater samples were tested for metals by EPA Methods 200.7, and 245.2, and GFAA (Graphite Furnace Atomic Absorption) Method. The following inadequacies/irregularities were found for all the metals testing by ICP. The possible matrix effects could not be determined, since the laboratory intermingled SW-846 and Contract Laboratory Program (CLP) methods by performing lab duplicate samples instead of testing matrix spike duplicate sample data. Also, initial calibration verification and continuing calibration verification were labeled audit check

results. Note that whenever audit samples were outside of the CLP criteria of 90-110% recovery for the metals, first sample run result by the SW-846 method was reported.

The mercury results for 2000SY04S40 through S58 are considered estimated since the holding time of 28 days was exceeded.

The chromium and zinc results for 2000SY04S40 through S58 are considered estimated and biased slightly high due to continuing calibration verification (CCV) recovery of 110.64% for chromium and CCV recoveries of 113.22% and 111.19% for zinc.

The selenium results for 2000SY04S54 are considered estimated and biased slightly high due to CCV recovery of 112%.

The mercury results for 2000SY04S01 through S13 are considered estimated and biased slightly high due to high matrix spike (MS) recovery of 127.2% and high laboratory control sample (LCS) result of 124.3%.

The cobalt results for 2000SY04S01 through S13 are considered estimated and biased slightly high due to initial calibration verification (ICV) recovery of 110.99% and continuing calibration verification (CCV) recovery of 110.52%.

The iron results for 2000SY04S01 through S13 are considered estimated and biased slightly high due to CCV recovery of 110.94%.

The sodium results for 2000SY04S01 through S13 are considered estimated and biased low due to low matrix spike (MS) recovery of 60.77%.

The calcium results for 2000SY01S01 through S14 and 2000SY01R12 are considered estimated and biased high due to contamination in the preparation blank at 158 ppb.

The chromium and cobalt results for 2000SY01S01 through S14 and 2000SY01R12 are considered estimated and biased high due to high CCV recoveries of 112.35%, 112.96%, and 112.96% chromium and CCV recovery of 115.4% for cobalt.

The chromium and cobalt results for 2000SY04S31 through S39 are considered estimated and slightly biased high due to CCV recovery of 112.63% for chromium and CCV recovery of 110.74% for cobalt.

The iron results for 2000SY04S14 through S39 are considered estimated due to contamination in the preparation blank of 42.2 ppb, which is approaching the reporting limit of 46.5 ppb.

The magnesium results for 2000SY04S31 through S39 are considered estimated and biased high due to CCV recovery of 111.44%.

The nickel results for 2000SY04S14 through S39 are considered estimated and slightly biased high due to ICV recovery of 111.68% and CCV recoveries of 111.15%, 110.76%, and 114.01%.

### **General Chemistry**

Groundwater samples were tested for sulfate and bromide by EPA Method 300.0. The possible matrix effects could not be determined, since the laboratory intermingled SW-846 and CLP methods by testing duplicate samples instead of testing matrix spike duplicate sample data.

The sulfate results for 2000SY03S01 through S11 are considered estimated due to low level contamination in the initial calibration blank samples of 3.67 ppm and 3.51 ppm.

The sulfate results for 2000SY04S14 through S39 are considered estimated and biased low due to low laboratory fortified blank recovery of 66.5%.

The sulfate results for 2000SY04S44, S0000SY04S49, and S0000SY04S58 are considered estimated due to low calibration coefficient of 0.992.

### Results:

Multiple samples showed exceedences for Drinking Water Standard Secondary Maximum Contaminant Levels (SMCLs), Maximum Contaminant Levels (MCLs) and action levels.

The background well is WT102A and upgradient well is WT112A. Both wells showed SMCL exceedences in manganese. The background well also showed SMCL exceedence in sulfate. See attached charts for results and other SMCL exceedences. The total chromium concentration exceeded the MCL of 100 ppb with GPE-2 at 154 ppb, GP114-3 at 173 ppb, and GP16-2 at 124 ppb. The total arsenic concentration exceeded the MCL of 50 ppb with GP16-2 at 74 ppb. The total lead concentration exceeded the MCL of GPE-2 at 27 ppb, GP114-3 at 35 ppb, GP16-2 at 47, 15 ppb with GPE-1 at 15 ppb, and GP101-1 at 27 ppb.

All charts list the data in terms of reporting limits, instead of method detection limits that a few of the laboratory reports indicated. Plume delineation could not be determined since twenty additional wells and twelve residential sampling locations/descriptions were included in the data package than are shown in the field sampling plan and maps.

Note that sample set 2000SY04S01 thru S13 round was duplicated in sample set 2000SY01S01 thru S14. The reasons for this duplication is unknown.

### Conclusion

For overall project goal, the data are acceptable for use. Quarterly sampling and any ongoing

remediation should continue to document the MCL, SMCL, and action levels exceedences. Also, field sheets and a revised sampling location map should be submitted with future results and the SW-846 methods and criteria listed in the Himco Supplemental Ground Water Investigation Field Sampling Plan/Quality Assurance Project Plan should be followed in the future.

SDG: EDCJ8

CASE: 27876

SITE: HIMCO DUMP (IN)

This review covers twenty (20) low concentration water samples, numbered EDCJ4, EDCJ5, EDCJ8, EDCJ9, EDCK0 - EDCK6, EDCK8, EDCK9, EDCL0 - EDCL4, EDCM1 and EDCM2, were collected on 03/14, 15, and 16/2000. The Envirosystems, Inc., of Columbia, MD received the samples on March 17, 2000, in good condition. The samples were analyzed for low concentration VOA, SVOA. Sample EDCL1 is identified as a Trip Blank and were analyzed for VOA only. Samples EDCL2, EDCL3, EDCM1 and EDCM2 were also analyzed for VOA only. All samples were analyzed per CLP SOW OLC02.1.

Laboratory Control Samples (LCS) Identified as VLCSBG (VOA) and SCLS06 (SVOA) were analyzed in place of matrix spike/matrix spike duplicate (MS/MSD) samples.

Sample EDCL1 was identified as a Trip Blank. No samples appeared to be duplicate samples.

The VOA samples were analyzed within the holding time of fourteen (14) days for preserved water samples and the SVOA samples were extracted within the required holding time of seven days. The analysis of the semivolatile extracts were performed within forty (40) days. Therefore, the results for the VOA and the SVOA fractions are acceptable.

The reviewer's narrative and data qualifiers are noted in the following pages.

CASE: 27876  
SITE: HIMCO DUMP (IN)

Below is a summary of the out-of-control audits and the possible effect on the data for this case.

**1. HOLDING TIME**

This review covers twenty (20) low concentration water samples, numbered EDCJ4, EDCJ5, EDCJ8, EDCJ9, EDCK0 - EDCK6, EDCK8, EDCK9, EDCL0 - EDCL4, EDCM1 and EDCM2, were collected on 03/14, 15 and 16/2000. The Envirosystems, Inc., Columbia, MD received the samples on March 17, 2000 in good condition. The samples were analyzed for low concentration VOA and SVOA. Sample ECCL1 is identified as a Trip Blank and were analyzed for VOA only. Samples EDCL2, EDCL3 EDCM1 and EDCM2 were also analyzed for VOA only. All samples were analyzed per CLP SOW OLC02.1.

The VOA samples were analyzed within the holding time of fourteen (14) days for preserved water samples; therefore, the results are acceptable.

The SVOA samples were extracted within the holding time of seven (7) days. The extracts were promptly analyzed within the required 40 days criteria. Therefore; the results are acceptable.

**2. GC/MS TUNING AND GC PERFORMANCE**

The GC/MS tuning complied with the mass list and ion abundance criteria for BFB and DFTPP.

The Florisil Cartridge Check met the required QC criteria; therefore, the results are acceptable.

**3. CALIBRATION**

Initial and continuing calibration standards of VOA and SVOA were evaluated for the Target Compounds List (TCL) and outliers were recorded on the outlier forms included as a part of this narrative.

**4. METHOD BLANK**

Blanks VBLKBG and VBLKBH are the low concentration water Volatile Method Blanks. The Method Blank VBLKBG was clean, no TCLs or TICs

SITE: HIMCO DUMP (IN)

reported. Method Blank VBLKBH reported a detectable amount of Methylene Chloride ( $0.7\mu\text{g/L}$ ) a common laboratory contaminant. Therefore, the presence of this contaminant in the samples associated with the Blank, VBLKBH, is qualified as non-detected (U) when the sample results are less than ten (10) times the Blank results. Blank VHBLKBH is identified as a Holding Blank sample which was also clean.

Please refer to Form I LCV for a list of associated samples.

Blank SBLK73 and SBLK76 are the Low Conc. water Semivolatile Method Blanks. Blank SBLK73 reported no TICs and no TCLs. Blank SBLK76 reported a detectable amount of Butylbenzylphthalate at  $3\mu\text{g/L}$  which is a common laboratory contaminant and no TICs. The presence of this contaminant in samples associated with SBLK76 is qualified as non-detected "U" when the samples results are less than ten (10) times the Blank results.

Please refer to Form-IV LCSV for a list of associated samples.

**5. SURROGATE RECOVERY AND SYSTEM MONITORING COMPOUNDS**

The low concentration recovery of the system monitoring spiking Compound (BFB = Bromofluorobenzene) for the volatile analysis and the recovery of the surrogate spiking compounds for the semivolatile analysis met the required QC limits for all samples; therefore, all results are acceptable.

**6. MATRIX SPIKE/MSD SAMPLES**

A Laboratory Control (LCS) Samples identified as VLCSBG (for volatile) and SLCS06 (for semivolatile) were used in place of a matrix spike/matrix spike duplicate sample for the low concentration analysis. All spike recoveries were within the QC limits; therefore, the results are acceptable.

**7. FIELD BLANK AND FIELD DUPLICATE**

Sample EDCL1 was identified as a Trip Blank analyzed for volatiles only. The sample was clean; no TCLs or TICs were reported.

8. INTERNAL STANDARDS

The internal standard retention times and area counts for the low concentration volatile and semivolatile samples were within the required QC limits; therefore, the results are acceptable.

9. COMPOUND IDENTIFICATION

Target compounds and TICs were correctly identified by "best fit" library search method.

10. COMPOUND QUANTITATION AND REPORTED DETECTION LIMITS

VOA and SVOA Target Compounds (TCLs) and Tentative Identified Compounds (TICs) were properly quantitated; therefore, the results are acceptable.

11. SYSTEM PERFORMANCE

The GC/MS baseline indicated acceptable performance.

12. ADDITIONAL INFORMATION

J/R = All positive results are estimated "J" and non-detected results are unusable "R"

- \* = These flags should be applied to the analytes on the sample data sheets.
- # = Minimum Relative Response Factor

## ORGANIC DATA QUALIFIER DEFINITIONS

For the purpose of defining the flagging nomenclature used in this document, the following code letters and associated definitions are provided:

**VALUE** - when/if the result of a value is greater than or equal to the Contract Required Quantitation Limit (CRQL).

- U** Indicates that the compound was analyzed for, but not detected. The sample quantitation limit corrected for dilution and percent moisture is reported.
- J** Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of a compound where the result is less than the sample quantitation limit, but greater than zero. The flag is also used to indicate a reported result having an associated QC problem.
- R** Indicates the data are unusable. (NOTE: The analyte may or may not be present.)
- N** Indicates presumptive evidence of a compound. This flag is only used for a tentatively identified compound, where the identification is based on a mass spectral library search.
- P** Indicates a pesticide/Aroclor target analyte when there is greater than 25% difference for the detected concentrations between the two GC columns. The lower of the two results is reported.
- C** Indicates pesticide results that have been confirmed by GC/MS.
- B** Indicates the analyte is detected in the associated blank as well as in the sample.
- E** Indicates compounds whose concentrations exceed the calibration range of the instrument.
- D** Indicates an identified compound in an analysis has been diluted. This flag alerts the data user to any differences between the concentrations reported in the two analysis.
- A** Indicates tentatively identified compounds that are suspected to be aldol condensation products.
- G** Indicates the TCLP Matrix Spike Recovery was greater than the upper limit of the analytical method.
- L** Indicates the TCLP Matrix Spike Recovery was less than the lower limit of the analytical method.
- T** Indicates the analyte is found in the associated TCLP extraction blank as well as in the sample.

**X,Y,Z** are reserved for laboratory defined flags.

# Organic Traffic Report & Chain of Custody Record (For Organic CLP Analysis)

Case No. **77876**

Date Received -- Received by: **3/16/00** *[Signature]*

Laboratory Contract Number: **15206709**

Received by: **SDG**

Contract Number: **152099**

Price: **1147**

1. Matrix (Enter in Column A)  
 1. Surface Water  
 2. Ground Water  
 3. Leachate  
 4. Field QC  
 5. Soil/Sediment  
 6. Oil (High only)  
 7. Waste (High only)  
 8. Other (Specify in Column A)

2. Preservative (Enter in Column D)  
 1. HCl  
 2. HNO3  
 3. NaHSO4  
 4. H2SO4  
 5. Ice only  
 6. Other (Specify in Column D)  
 N. Not preserved

2. Region No. **5** Sampling Co. **USEPA**

4. Date Shipped **3/17/00** Carrier **Fed. Ex**

3. Sampler (Name) **Doug Yeskis**

3. Sampler Signature **Doug Yeskis**

3. Purpose:  SF  PRP  ST  FED

Lead Action:  CLEM  PA  REM  RI  SI  ESI

Long-Term Action:  FS  RD  RA  O&M  NPLD

4. Airbl Number **7193601590**

5. Ship To: **Enviro Systems, Inc  
9200 Rumsey Rd, Suite B102  
Columbia, MD 21045  
ATTN: Sample Custodian**

Samples for this contract are analyzed by EPA SDW DL002.1 for low concentration water.

All instances where GC/MS manual integration was necessary are initialled and dated by the analyst.

The volatile analysis was performed using a Restek 105 meter RTX-502.2 column with an inner diameter of 0.53 mm and a 3 micron film thickness.

The trap used with the autosampler is a 30 cm Supelco, Inc K Trap (VOCARB 3000) packed with Carboxen B/Carboxen 1000 & 1001.

All GC criteria was met for all sample in this SDG.

Each of the twelve lab control sample compound recoveries was within the GC limits.

SEMI-VOLATILES SECTION

The semi-volatile analysis was performed using a HP-5MS 30 meter column with an inner diameter of 0.25 mm and a 0.25 micron film thickness.

All samples were extracted within holding time on 3/22/00 however eight of the samples were lost because the condenser cooling water was not turned on. The eight samples were reextracted on 3/23/00 and samples EDCK5, EDCK6, EDCK9 and EDCK10 were outside of the five day holding time.

Butylbenzylphthalate is present below the detection limit in method blank SBLK76. The compound is present in several of the samples and may be a result of laboratory contamination.

All other QC criteria was met for all samples in this SDG.

Each of the fourteen lab control sample compound recoveries was within the QC limits.

I CERTIFY THAT THIS DATA PACKAGE IS IN COMPLIANCE WITH THE TERMS AND CONDITIONS OF THE CONTRACT, BOTH TECHNICALLY AND FOR COMPLETENESS, FOR OTHER THAN THE CONDITIONS DETAILED ABOVE. RELEASE OF THE DATA CONTAINED IN THIS HARDCOPY DATA PACKAGE HAS BEEN AUTHORIZED BY THE LABORATORY MANAGER OR HIS DESIGNEE, AS VERIFIED BY THE FOLLOWING SIGNATURE:

TO: Data User: USEPA

We have reviewed the data for the following case:

SITE NAME: HIMCO LANDFILL (IN)

CASE NUMBER: 27986 SDG NUMBER: EDPK9

Number and Type of Samples: 16 (WATER)

Sample Numbers: EDPK9, EDPL0-9, EDPMD-5

Laboratory: PDP Hrs for Review: 10.5

Following are our findings:

*The data are acceptable and usable with the  
qualifications described in the attached narrative.  
Richard J. Bygnik*

CC: Cecilia Moore

NARRATIVE

LABORATORY: PDP ANALYTICAL SERV.

Page 2 of 8

SDG: EDPK9

CASE: 27986

SITE: HIMCO LANDFILL

This review covers sixteen (16) low concentration water samples, numbered EDPK9, EDPLO - EDPL9, EDPM0 - EDPM2, EDPM4 and EDPM5, were collected on 04/17 and 18/00. The PDP Analytical Services, of Woodlands, TX received the samples on 04/19/00, in good condition. The samples were analyzed for low concentration VOAs and SVOAs. All samples were analyzed per CLP SOW OLC02.1.

Sample EDPM4 and EDPM5 are Trip Blanks and analyzed for volatiles only.

Laboratory Control Samples (LCS) Identified as VLCS54 and VLCS55 (VOAs) and SLCS60 (SVOA) were analyzed in place of matrix spike/matrix spike duplicate (MS/MSD) samples.

The VOA samples were analyzed within the holding time of fourteen (14) days for preserved water samples and the SVOA samples were extracted within the required holding time of seven days. The analysis of the semivolatile extracts were performed within forty (40) days. Therefore, the results for the VOA and SVOA fractions are acceptable.

The reviewer's narrative and data qualifiers are noted in the following pages.

NARRATIVE

LABORATORY: PDP ANALYTICAL SERV.

Page 3 of 8

SDG: EDPK9

CASE: 27986

SITE: HIMCO LANDFILL

Below is a summary of the out-of-control audits and the possible effect on the data for this case.

**1. HOLDING TIME**

This review covers sixteen (16) low concentration water samples, numbered EDPK9, EDPL0 - EDPL9, EDPM0 - EDPM2, EDPM4 and EDPM5 were collected on 04/17 and 18/00. The PDP Analytical Services, of Woodlands, TX received the samples on 04/19/00 in good condition. The samples were analyzed for low concentration VOAs and SVOAs. All samples were analyzed per CLP SOW OLC02.1.

The VOA samples were analyzed within the holding time of fourteen (14) days for preserved water samples; therefore, the results are acceptable.

The SVOA samples were extracted within the holding time of seven (7) days. The extracts were promptly analyzed within the required 40 days criteria. Therefore; the results are acceptable.

**2. GC/MS TUNING AND GC PERFORMANCE**

GC/MS tuning complied with the mass list and ion abundance criteria for BFB and DFTPP.

**3. CALIBRATION**

Initial and continuing calibration standards of VOA and SVOA were evaluated for the Target Compounds List (TCL) and outliers were recorded on the outlier forms included as a part of this narrative.

**4. METHOD BLANK**

Blanks VBLK54 and VBLK55 are the low concentration water Volatile Method Blanks. The Method Blanks were clean, no TCLs or TICs reported. Blank VHBLK01 is identified as a Holding Blank sample which was also clean.

NARRATIVE

LABORATORY: PDP ANALYTICAL SERV.

Page 4 of 8

SDG: EDPK9

CASE: 27986

SITE: HIMCO LANDFILL

Blanks SBLK27 is the low conc. water Semivolatile Method Blank. Blank SBLK27 reported no TCLs and no TICs.

Please refer to Form-IV LCV and Form-IV LCSV for a list of associated samples.

5. SURROGATE RECOVERY AND SYSTEM MONITORING COMPOUNDS

The low concentration recovery of the system monitoring spiking Compound (BFB = Bromofluorobenzene) for the volatile analysis and the surrogate compounds for the semivolatile analysis met the required QC limits for all samples. Therefore, all results are acceptable.

6. MATRIX SPIKE/MSD SAMPLES

A Laboratory Control (LCS) Samples identified as VLCS54 and VLCS55 (for volatiles) and SLCS60 (for semivolatile) were used in place of a matrix spike/matrix spike duplicate sample for the low concentration analysis. All spike recoveries were within the QC limits and the results are acceptable.

7. FIELD BLANK AND FIELD DUPLICATE

Sample EDPM4 and EDPM5 are Trip Blanks and analyzed for volatiles only. The samples reported a detectable amount of Methylene Chloride at 0.5µg/L and 0.9µg/L, respectively, and no TICs.

8. INTERNAL STANDARD

The internal standard retention times and area counts for the low concentration volatile and semivolatile samples were within the required QC limits; therefore, the results are acceptable.

9. COMPOUND IDENTIFICATION

Target compounds and TICs were correctly identified by "best fit"

library search method.

10. COMPOUND QUANTITATION AND REPORTED DETECTION LIMITS

VOA and SVOA Target Compounds (TCLs) and Tentative Identified Compounds (TICs) were properly quantitated; therefore, the results are acceptable.

11. SYSTEM PERFORMANCE

GC/MS baseline indicated acceptable performance.

12. ADDITIONAL INFORMATION

None

## SDG NARRATIVE

MAY 10 2000

### SAMPLE RECEIPT :

04/19/00 @ 09:02 A.M. - Received two shipments consisting of two coolers: Cooler 1 temperature : 4°C. Cooler 2 temperature : 4°C (COC391562, COC391563, COC391564, COC391565) contained the following:

EDPK9 - 2-1L Amber, 3-40mL Voa Vials.  
EDPL0 - 2-1L Amber, 3-40mL Voa Vials.  
EDPL1 - 2-1L Amber, 3-40mL Voa Vials.  
EDPL2 - 2-1L Amber, 3-40mL Voa Vials.  
EDPL3 - 2-1L Amber, 3-40mL Voa Vials.  
EDPL4 - 2-1L Amber, 3-40mL Voa Vials.  
EDPL5 - 2-1L Amber, 3-40mL Voa Vials.  
EDPL6 - 2-1L Amber, 3-40mL Voa Vials.  
EDPL7 - 2-1L Amber, 3-40mL Voa Vials.  
EDPL8 - 2-1L Amber, 3-40mL Voa Vials.  
EDPL9 - 2-40mL Voa Vials.  
EDPM0 - 2-1L Amber, 3-40mL Voa Vials( 1-40mL Voa received broken).  
EDPM4 - 2-40mL Voa Vials.

04/20/00 @ 09:04 A.M. - Received one shipment consisting of two coolers: Cooler 1 temperature : 4°C. Cooler 2 temperature : 4°C (COC391566) contained the following:

EDPM1 - 2-1L Amber, 3-40mL Voa Vials.  
EDPM2 - 2-1L Amber, 3-40mL Voa Vials.  
EDPM5 - 2-40mL Voa Vials.

No other problems were encountered during sample receipt.

### VOLATILES:

All samples were analyzed on a HP 5973 GC/MS using a 60 meters long DB-624 column having a 0.53mm ID and 3um film thickness. The trap used was a OV-1/Tenax/Silica Gel (Tekmar #6. Cat 14-1755-003) . A 20 mL purge volume was used for all samples, blanks and standards. The concentrations of the standards and spikes were maintained at the levels required by the Statement of Work (SOW).

The following field samples are analyzed for volatiles in this SDG. The pH of the samples is listed against them.

|       |     |       |     |       |     |

## SDG NARRATIVE

|       |     |       |     |
|-------|-----|-------|-----|
| EDPL3 | 2.0 | EDPM0 | 2.0 |
| EDPL4 | 2.0 | EDPM4 | 2.0 |
| EDPL5 | 2.0 |       |     |

Manual integration's were performed for the following samples for the compounds listed against them.

VSTD00158 – Acetone, 2-Hexanone, 1,2-Dibromo-3-chloropropane, 1,2,4-Trichlorobenzene.

VSTD00258 – 1,2-Dibromo-3-chloropropane, 1,2,4-Trichlorobenzene.

VSTD00563 – Bromomethane, Chloroethane, Acetone, Carbon Tetrachloride, Bromoform, 1,2-Dibromo-chloropropane.

VBLK77 – 1,4-Difluorobenzene.

EDPK9 – Methylene Chloride, cis-1,2-Dichloroethene.

EDPL1 – 1,1-Dichloroethane.

EDPL6 – 1,1-Dichloroethane.

These manual integration's were necessary because the software failed to accurately integrate the entire peak. In all the above instances, the quantitation reports are flagged with "m". A hard copy printout of the manual integration's along with the scan ranges and initials of the operator is included in the data package .

For those target compounds with low signals that required a manual search for the initial calibration, the analysts has performed the same manual search for every sample analysis to ensure that false negative results are not reported. All peaks in the calibration standards, samples and QC samples are checked manually to ensure that the software has correctly identified and integrated the peaks.

No problems were encountered during sample analysis.

### SEMIVOLATILES:

The following samples were extracted using continuous liquid/liquid extraction method on 04/23/00

EDPK9, EDPL0, EDPL1, EDPL2, EDPL3, EDPL4, EDPL5, EDPL6, EDPL7, EDPL8, EDPM0, EDPM1, EDPM2

All samples were analyzed on a HP 5973 GC/MS using a 30 meters long and 0.25mm ID DB-5 column . A 2uL injection was used.

Manual integration's were performed for the following samples for the compounds listed against them.

SSTD00502 – Indeno(1,2,3-cd)pyrene.

SSTD01002 – Indeno(1,2,3-cd)pyrene.

SSTD02002 – Indeno(1,2,3-cd)pyrene

SSTD05002 – Indeno(1,2,3-cd)pyrene.

We have reviewed the data for the following case:

SITE NAME: HIMCO LANDFILL (IN)

CASE NUMBER: 27986 SDG NUMBER: EDCF6

Number and Type of Samples: 18 (WATER)

Sample Numbers: EDCF6-9, EDCG1, EDCG3, EDPM3, EBP46-8

Laboratory: PDP EDPNO-7 Hrs for Review: 12.5

Following are our findings:

*the data as reliable and acceptable with the  
qualifications described in the attached narrative

CASE: 27986

SITE: HIMCO LANDFILL

This review covers eighteen (18) low concentration water samples, numbered EDCF6 - EDCF9, EDCG1, EDCG3, EDPM3, EDPM6 - EDPM8, and EDPN0 - EDPN7, were collected on 04/25/2000. The PDP Analytical Services, of Woodland, TX received the samples on 04/27/2000, in good condition. The samples were analyzed for low concentration VOAs and SVOAs. Samples EDPM8 and EDCG1 are identified as Trip Blanks and were analyzed for VOA. All samples were analyzed per CLP SOW OLC02.1.

Laboratory Control Samples (LCS) Identified as VLCS94, VLCS 5 and VLCS97 (VOA) and SLCS69 (SVOA) were analyzed in place of matrix spike/matrix spike duplicate (MS/MSD) samples.

Samples EDPM8 and EDCG1 were identified as Trip Blanks and sample.

The VOA samples were analyzed within the holding time of fourteen (14) days for preserved water samples and the SVOA samples were extracted within the required holding time of seven days. The analysis of the semivolatile extracts were performed within forty (40) days. Therefore, the results for the VOA and SVOA fractions are acceptable.

The reviewer's narrative and data qualifiers are noted in the following pages.

CASE: 27986

SITE: HIMCO LANDFILL

Below is a summary of the out-of-control audits and the possible effect on the data for this case.

**1. HOLDING TIME**

This review covers eighteen (18) low concentration water samples, numbered EDCF6 - EDCF9, EDCG1, EDCG3, EDPM3, EDPM6 - EDPM8 and EDPN0 - EDPN7, were collected on 04/25/2000. The PDP Analytical Services, of Woodland, TX received the samples on 04/27/2000 in good condition. The samples were analyzed for low concentration VOAs and SVOAs. Samples EDPM8 and EDCG1 are identified as Trip Blanks and were analyzed for VOA only. All samples were analyzed per CLP SOW OLC02.1.

The VOA samples were analyzed within the holding time of fourteen (14) days for preserved water samples; therefore, the results are acceptable.

The SVOA samples were extracted within the holding time of seven (7) days. The extracts were promptly analyzed within the required 40 days criteria. Therefore; the results are acceptable.

**2. GC/MS TUNING AND GC PERFORMANCE**

GC/MS tuning complied with the mass list and ion abundance criteria for BFB and DFTPP.

**3. CALIBRATION**

Initial and continuing calibration standards of VOA and SVOA were evaluated for the Target Compounds List (TCL) and outliers were recorded on the outlier forms included as a part of this narrative.

**4. METHOD BLANK**

Blanks VBLK95 and VBLK97 are the low concentration water Volatile Method Blanks. The Method Blanks were clean, no TCLs or TICs reported. Blank VHBLK01 is identified as a Holding Blank sample

which was also clean.

Blank SBLK37 is the low conc. water Semivolatile Method Blank. Blank SBLK37 reported no TCLs and no TICs.

Please refer to Form-IV LCV and Form-IV LCSV for a list of associated samples.

#### 5. SURROGATE RECOVERY AND SYSTEM MONITORING COMPOUNDS

The low concentration recovery of the system monitoring spiking Compound (BFB = Bromofluorobenzene) for the volatile analysis and the surrogate compounds for the semivolatile analysis met the required QC limits for all samples; therefore, all results are acceptable.

#### 6. MATRIX SPIKE/MSD SAMPLES

A Laboratory Control (LCS) Samples identified as VLCS94, VLCS95 and VLCS97 (for volatiles) and SLCS69 (for semivolatiles) were used in place of a matrix spike/matrix spike duplicate sample for the low concentration analysis. All spike recoveries were within the QC limits; therefore, the results are acceptable.

#### 7. FIELD BLANK AND FIELD DUPLICATE

Samples EDPM8 and EDCG1 were identified as Trip Blanks and analyzed for volatiles only. The sample EDPM8 reported a detectable amount of Methylene Chloride (0.6µg/L) and no TICs. Volatile sample EDCG1 reported a detectable amount of Methylene Chloride (3µg/L) and Acetone (4µg/L), and no TICs.

#### 8. INTERNAL STANDARDS

The internal standard retention times and area counts for the low concentration volatile and semivolatile samples were within the required QC limits; therefore, the results are acceptable.

NARRATIVE

LABORATORY: PDP ANALYTICAL SRVs.

Page 5 of 8

SDG: EDCF6

CASE: 27986

SITE: HIMCO LANDFILL

9. COMPOUND IDENTIFICATION

Target compounds and TICs were correctly identified by "best fit" library search method.

10. COMPOUND QUANTITATION AND REPORTED DETECTION LIMITS

VOA and SVOA Target Compounds (TCLs) and Tentative Identified Compounds (TICs) were properly quantitated; therefore, the results are acceptable.

11. SYSTEM PERFORMANCE

GC/MS baseline indicated acceptable performance.

GC baseline for pest/PCB analysis indicated acceptable performance.

12. ADDITIONAL INFORMATION

None.

J/R = All positive results are estimated "J" and non-detected results are unusable "R"

- \* = These flags should be applied to the analytes on the sample data sheets.
- # = Minimum Relative Response Factor

## ORGANIC DATA QUALIFIER DEFINITIONS

For the purpose of defining the flagging nomenclature used in this document, the following code letters and associated definitions are provided:

**VALUE** - when/if the result of a value is greater than or equal to the Contract Required Quantitation Limit (CRQL).

- U** Indicates that the compound was analyzed for, but not detected. The sample quantitation limit corrected for dilution and percent moisture is reported.
- J** Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of a compound where the result is less than the sample quantitation limit, but greater than zero. The flag is also used to indicate a reported result having an associated QC problem.
- R** Indicates the data are unusable. (NOTE: The analyte may or may not be present.)
- N** Indicates presumptive evidence of a compound. This flag is only used for a tentatively identified compound, where the identification is based on a mass spectral library search.
- P** Indicates a pesticide/Aroclor target analyte when there is greater than 25% difference for the detected concentrations between the two GC columns. The lower of the two results is reported.
- C** Indicates pesticide results that have been confirmed by GC/MS.
- B** Indicates the analyte is detected in the associated blank as well as in the sample.
- E** Indicates compounds whose concentrations exceed the calibration range of the instrument.
- D** Indicates an identified compound in an analysis has been diluted. This flag alerts the data user to any differences between the concentrations reported in the two analysis.
- A** Indicates tentatively identified compounds that are suspected to be aldol condensation products.
- G** Indicates the TCLP Matrix Spike Recovery was greater than the upper limit of the analytical method.
- L** Indicates the TCLP Matrix Spike Recovery was less than the lower limit of the analytical method.
- T** Indicates the analyte is found in the associated TCLP extraction blank as well as in the sample.

X,Y,Z are reserved for laboratory defined flags.

## SDG NARRATIVE

MAY 19 2000

### SAMPLE RECEIPT :

04/27/00 @ 09:38 A.M. - Received three shipments consisting of three coolers: Cooler 1 temperature : 4°C. Cooler 2 temperature : 4°C. Cooler 3 temperature : 4°C. (COC391570, COC391567, COC391571, COC391575, COC391569, COC391535) contained the following:

EDPM3 - 2-1L amber, 3-40mL Voa Vials.  
EDPM6 - 2-1L amber, 3-40mL Voa Vials.  
EDPM7 - 2-1L amber, 3-40mL Voa Vials.  
EDPM8 - 2-40mL Voa Vials.  
EDPN5 - 2-1L amber, 3-40mL Voa Vials.  
EDPN6 - 2-1L amber, 3-40mL Voa Vials.  
EDPN7 - 2-1L amber, 3-40mL Voa Vials.  
EDCF6 - 2-1L amber, 3-40mL Voa Vials.  
EDCF7 - 2-1L amber, 3-40mL Voa Vials.  
EDCF8 - 2-1L amber, 3-40mL Voa Vials.  
EDCG1 - 2-40mL Voa Vials.  
EDCF9 - 2-1L amber, 3-40mL Voa Vials.  
EDPN1 - 2-1L amber, 3-40mL Voa Vials.  
EDPN2 - 2-1L amber, 3-40mL Voa Vials.  
EDPN3 - 2-40mL Voa Vials.  
EDPN4 - 2-1L amber, 3-40mL Voa Vials.  
EDPN0 - 2-1L amber, 3-40mL Voa Vials.  
EDCG3 - 2-1L amber, 3-40mL Voa Vials.

No other problems were encountered during sample receipt.

### VOLATILES:

All samples were analyzed on a HP 5973 GC/MS using a 60 meters long DB-624 column having a 0.53mm ID and 3um film thickness. The trap used was a OV-1/Tenax/Silica Gel (Tekmar #6. Cat 14-1755-003) . A 20 mL purge volume was used for all samples, blanks and standards. The concentrations of the standards and spikes were maintained at the levels required by the Statement of Work (SOW).

The following field samples are analyzed for volatiles in this SDG. The pH of the samples is listed against them.

|       |     |       |     |

 LOW CONC. WATER VOLATILE METHOD BLANK SUMMARY

EPA SAMPLE NO.

VBLK97

Lab Name: PDP ANALYTICAL SERVICES

Contract: 68-D7-0004

Lab Code: PDP

Case No.: 27986

SAS No.:

SDG No.: EDCF6

Lab Sample ID: GVBLK061

Date Analyzed: 05/02/00

Lab File ID: G0941

Time Analyzed: 0028

Instrument ID: G-HP5973

GC Column: DB-624 ID: 0.53 (mm) Length: 60 (m)

THIS METHOD BLANK APPLIES TO THE FOLLOWING SAMPLES AND LCS:

|    | EPA<br>SAMPLE NO. | LAB<br>SAMPLE ID | LAB<br>FILE ID | TIME<br>ANALYZED |
|----|-------------------|------------------|----------------|------------------|
| 01 | VLCS97            | GVLCS061         | G0942          | 0114             |
| 02 | VHBLK01           | 6033.001         | G0944          | 0248             |

SUBJECT: Organic Data Review for Case 27986 ; SDG # EDCG0. Volatile and Semivolatile Analyses Using SOW OLC02.1(Low Conc. Analysis).

Attached is the deliverable for Case 27986, SDG EDCG0 of Volatile and Semivolatile analysis for seventeen (17) water samples. Included in the deliverable is the Manually prepare case narrative. If you have any question please feel free to contact Ira Wilson; 312/353-2947.

NARRATIVE

LABORATORY: PDP ANALYTICAL SRVs.

Page 2 of 8

SDG: EDCG0

CASE: 27986

SITE: HIMCO LANDFILL

This review covers seventeen (17) low concentration water samples, numbered EDCG0, EDCG2, EDCG4 through EDCG9, EDCH0, E00FA through E00FE, E00F8, E00F9 and E0057, were collected on 04/26 and 28/2000. The PDP Analytical Services, of Woodland, TX received the samples on 04/28/2000, in good condition. The samples were analyzed for low concentration VOAs and SVOAs. All samples were analyzed per CLP SOW OLC02.1.

Laboratory Control Samples (LCS) Identified as VLCS96 and VLCS97 (VOA) and SLCS70 (SVOA) were analyzed in place of matrix spike/matrix spike duplicate (MS/MSD) samples.

The VOA samples were analyzed within the holding time of fourteen (14) days for preserved water samples and the SVOA samples were extracted within the required holding time of seven days. The analysis of the semivolatile extracts were performed within forty (40) days. Therefore, the results for the VOA and SVOA fractions are acceptable.

The reviewer's narrative and data qualifiers are noted in the following pages.

**NARRATIVE**

**LABORATORY: PDP ANALYTICAL SRVs.**

Page **3** of **4**

**SDG: EDCG0**

**CASE: 27986**

**SITE: HIMCO LANDFILL**

Below is a summary of the out-of-control audits and the possible effect on the data for this case.

**1. HOLDING TIME**

This review covers seventeen (17) low concentration water samples, numbered EDCG0, EDCG2, EDCG4 through EDCG9, EDCH0, E00FA through E00FE, E00F8, E00F9 and E0057, were collected on 04/26 and 28/2000. The PDP Analytical Services, of Woodland, TX received the samples on 04/28/2000 in good condition. The samples were analyzed for low concentration VOAs and SVOAs. All samples were analyzed per CLP SOW OLC02.1.

The VOA samples were analyzed within the holding time of fourteen (14) days for preserved water samples; therefore, the results are acceptable.

The SVOA samples were extracted within the holding time of seven (7) days. The extracts were promptly analyzed within the required 40 days criteria. Therefore; the results are acceptable.

**2. GC/MS TUNING AND GC PERFORMANCE**

GC/MS tuning complied with the mass list and ion abundance criteria for BFB and DFTPP.

**3. CALIBRATION**

Initial and continuing calibration standards of VOA and SVOA were evaluated for the Target Compounds List (TCL) and outliers were recorded on the outlier forms included as a part of this narrative.

**4. METHOD BLANK**

Blanks VBLK96 and VBLK97 are the low concentration water Volatile Method Blanks. The Method Blanks were clean, no TCLs or TICs reported. Blank VHBLK01 is identified as a Holding Blank sample which was also clean.

NARRATIVE

LABORATORY: PDP ANALYTICAL SRVs.

Page 4 of 8

SDG: EDCG0

CASE: 27986

SITE: HIMCO LANDFILL

Blank SBLK39 is the low conc. water Semivolatile Method Blank. Blank SBLK39 reported no TCLs and no TICs.

Please refer to Form-IV LCV and Form-IV LCSV for a list of associated samples.

**5. SURROGATE RECOVERY AND SYSTEM MONITORING COMPOUNDS**

The low concentration recovery of the system monitoring spiking Compound (BFB = Bromofluorobenzene) for the volatile analysis and the surrogate compounds for the semivolatile analysis met the required QC limits for all samples; therefore, all results are acceptable.

**6. MATRIX SPIKE/MSD SAMPLES**

A Laboratory Control (LCS) Samples identified as VLCS96 and VLCS97 (for volatiles) and SLCS70 (for semivolatiles) were used in place of a matrix spike/matrix spike duplicate sample for the low concentration analysis. All spike recoveries were within the QC limits; therefore, the results are acceptable.

**7. FIELD BLANK AND FIELD DUPLICATE**

No samples were identified as Trip Blanks, Field Blanks or Duplicates. Results are not qualified based upon the results of the Field Blanks or Duplicates.

**8. INTERNAL STANDARDS**

The internal standard retention times and area counts for the low concentration volatile and semivolatile samples were within the required QC limits; therefore, the results are acceptable.

**9. COMPOUND IDENTIFICATION**

Target compounds and TICs were correctly identified by "best fit"

library search method.

**10. COMPOUND QUANTITATION AND REPORTED DETECTION LIMITS**

VOA and SVOA Target Compounds (TCLs) and Tentative Identified Compounds (TICs) were properly quantitated; therefore, the results are acceptable.

**11. SYSTEM PERFORMANCE**

GC/MS baseline indicated acceptable performance.

GC baseline for pest/PCB analysis indicated acceptable performance.

**12. ADDITIONAL INFORMATION**

None.

J/R = All positive results are estimated "J" and non-detected results are unusable "R"

- \* = These flags should be applied to the analytes on the sample data sheets.
- # = Minimum Relative Response Factor

## ORGANIC DATA QUALIFIER DEFINITIONS

For the purpose of defining the flagging nomenclature used in this document, the following code letters and associated definitions are provided:

**VALUE** - when/if the result of a value is greater than or equal to the Contract Required Quantitation Limit (CRQL).

- U** Indicates that the compound was analyzed for, but not detected. The sample quantitation limit corrected for dilution and percent moisture is reported.
- J** Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of a compound where the result is less than the sample quantitation limit, but greater than zero. The flag is also used to indicate a reported result having an associated QC problem.
- R** Indicates the data are unusable. (NOTE: The analyte may or may not be present.)
- N** Indicates presumptive evidence of a compound. This flag is only used for a tentatively identified compound, where the identification is based on a mass spectral library search.
- P** Indicates a pesticide/Aroclor target analyte when there is greater than 25% difference for the detected concentrations between the two GC columns. The lower of the two results is reported.
- C** Indicates pesticide results that have been confirmed by GC/MS.
- B** Indicates the analyte is detected in the associated blank as well as in the sample.
- E** Indicates compounds whose concentrations exceed the calibration range of the instrument.
- D** Indicates an identified compound in an analysis has been diluted. This flag alerts the data user to any differences between the concentrations reported in the two analysis.
- A** Indicates tentatively identified compounds that are suspected to be aldol condensation products.
- G** Indicates the TCLP Matrix Spike Recovery was greater than the upper limit of the analytical method.
- L** Indicates the TCLP Matrix Spike Recovery was less than the lower limit of the analytical method.
- T** Indicates the analyte is found in the associated TCLP extraction blank as well as in the sample.

X,Y,Z are reserved for laboratory defined flags.

### SDG NARRATIVE

**MAY 23 2000**

#### SAMPLE RECEIPT :

04/28/00 @ 09:48 A.M. - Received two shipments consisting of two coolers: Cooler 1 temperature : 4°C. Cooler 2 temperature : 3°C. (COC391529, COC391561, COC391574, COC391573) contained the following:

EDCG0 - 2-1L amber, 3-40mL Voa Vials.  
EDCH0 - 2-40mL Voa Vials.  
EDCG2 - 2-1L amber, 3-40mL Voa Vials.  
EDCG4 - 2-1L amber, 3-40mL Voa Vials.  
EDCG5 - 2-1L amber, 3-40mL Voa Vials.  
EDCG6 - 2-1L amber, 3-40mL Voa Vials.  
EDCG7 - 2-1L amber, 3-40mL Voa Vials.  
E0057 - 2-1L amber, 3-40mL Voa Vials.  
EDCG8 - 2-1L amber, 3-40mL Voa Vials.  
EDCG9 - 2-1L amber, 3-40mL Voa Vials.  
E00F8 - 2-1L amber, 3-40mL Voa Vials.  
E00F9 - 2-1L amber, 3-40mL Voa Vials.  
E00FA - 2-1L amber, 3-40mL Voa Vials.

E0057 was labeled on containers as E00F7.

No other problems were encountered during sample receipt.

04/29/00 @ 09:14 A.M. - Received one shipment consisting of two coolers: Cooler 1 temperature : 4°C. Cooler 2 temperature : 4°C. (COC391531) contained the following:

E00FB - 2-1L amber, 3-40mL Voa Vials.  
E00FD - 2-40mL Voa Vials.  
E00FC - 2-1L amber, 3-40mL Voa Vials.  
E00FE - 2-1L amber, 3-40mL Voa Vials.

No other problems were encountered during sample receipt.

#### VOLATILES:

All samples were analyzed on a HP 5973 GC/MS using a 60 meters long DB-624 column having a 0.53mm ID and 0.1µm film thickness. The trap used was a OV-1/Tenax/Silica Gel (Tekmar #6. Cat 14-1755-003) . A 20 mL purge time was used for all samples, blanks and standards. The concentrations of the standards and spikes were maintained at the levels required by the Statement of Work (SOW).

The following field samples are analyzed for volatiles in this SDG. The pH of the samples is listed against them.

Manual integration's were performed for the following samples for the compounds listed against them.

VSTD00160 – Chloromethane, Vinyl Chloride, Bromomethane, Chloroethane, 1,1-Dichloroethene, Carbon Disulfide, Acetone, Methylene Chloride, cis-1,2-Dichloroethene, 1,2-Dichloroethane, 1,1,1-Trichloroethane, Carbon Tetrachloride, 1,1,2-Trichloroethane, 1,2-Dibromo-3-chloropropane.

VSTD00260 – Chloromethane, Vinyl Chloride, Bromomethane, Chloroethane, 1,1-Dichloroethene, Carbon Disulfide, Acetone, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride, 1,2-Dibromo-3-chloropropane.

VSTD00560 – Chloromethane, Vinyl Chloride, Bromomethane, Chloroethane, 1,1-Dichloroethene, Carbon Disulfide, Acetone, Methylene Chloride, Bromochloromethane, 1,1,1-Trichloroethane, Carbon Tetrachloride, 1,2-Dibromo-3-chloropropane.

VSTD01060 – Chloromethane, Vinyl Chloride, Bromomethane, Chloroethane, 1,1-Dichloroethene, Carbon Disulfide, Acetone, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride, 1,2-Dibromo-3-chloropropane.

VSTD02560 – Chloromethane, Vinyl Chloride, Bromomethane, Chloroethane, 1,1-Dichloroethene, Carbon Disulfide, Methylene Chloride, 1,1,1-Trichloroethane, 1,2-Dibromo-3-chloropropane.

VSTD00566 – Chloromethane, Vinyl Chloride, Bromomethane, Chloroethane, 1,1-Dichloroethene, Carbon Disulfide, Acetone, Methylene Chloride, Carbon Tetrachloride, 1,2-Dibromo-3-chloropropane.

VSTD00567 – Chloromethane, Vinyl Chloride, Bromomethane, Chloroethane, 1,1-Dichloroethene, Carbon Disulfide, Acetone, 1,1,1-Trichloroethane, Carbon Tetrachloride, 1,2-Dibromo-3-chloropropane.

VLCS96 – Vinyl Chloride.

VLCS97 – Vinyl Chloride.

E0057 – Methylene Chloride.

E00FD – Methylene Chloride.

EDCH0 – Carbon disulfide, Acetone, Methylene Chloride.

These manual integration's were necessary because the software failed to accurately integrate the entire peak. In all the above instances, the quantitation reports are flagged with "m". A hard copy printout of the manual integration's along with the scan ranges and initials of the operator is included in the data package.

For those target compounds with low signals that required a manual search for the initial calibration, the analysts has performed the same manual search for every sample analysis to ensure that false negative results are not

### SDG NARRATIVE

reported. All peaks in the calibration standards, samples and QC samples are checked manually to ensure that the software has correctly identified and integrated the peaks.

No problems were encountered during sample analysis.

#### SEMIVOLATILES:

The following samples were extracted using continuous liquid/liquid extraction method on 05/03/00

EDCG0, EDCG2, EDCG4, EDCG5, EDCG6, EDCG7, EDCG8, EDCG9, E00F8, E00F9, E00FA, E00FB, E00FC, E00FE

All samples were analyzed on a HP 5971A GC/MS using a 30 meters long and 0.25mm ID DB-5 column . A 2uL injection was used.

Manual integration's were performed for the following samples for the compounds listed against them.

SSTD00502 – Indeno(1,2,3-cd)pyrene.

SSTD01002 – Indeno(1,2,3-cd)pyrene.

SSTD02002 – Indeno(1,2,3-cd)pyrene.

SSTD05002 – Indeno(1,2,3-cd)pyrene.

SSTD08002 – Benzo(b)fluoranthene, Benzo(k)fluoranthene, Indeno(1,2,3-cd)pyrene.

SSTD02009 – 2,2'-oxybis(1-Chloropropane).

SSTD02010 – 2,2'-oxybis(1-Chloropropane), 4-Chloroaniline, Indeno(1,2,3-cd)pyrene.

These manual integration's were necessary because the software failed to accurately integrate the entire peak. In all the above instances, the quantitation reports are flagged with "m". A hard copy printout of the manual integration's along with the scan ranges and initials of the operator is included in the data package .

For those target compounds with low signals that required a manual search for the initial calibration, the analysts has performed the same manual search for every sample analysis to ensure that false negative results are not reported. All peaks in the calibration standards, samples and QC samples are checked manually to ensure that the software has correctly identified and integrated the peaks.

No problems were encountered during sample extraction and sample analysis.

*I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hard copy data package has been authorized by the laboratory manager or his designee, as verified by the following signature:*

SUBJECT: Organic Data Review for Case 27986 ; SDG # EDCG0. Volatile and Semivolatile Analyses Using SOW OLC02.1(Low Conc. Analysis).

Attached is the deliverable for Case 27986, SDG EDCG0 of Volatile and Semivolatile analysis for seventeen (17) water samples. Included in the deliverable is the Manually prepare case narrative. If you have any question please feel free to contact Ira Wilson; 312/353-2947.

DATE:

SUBJECT: Review of Data  
Received for Review on 5-23-00

FROM: Stephen L. Ostrodka, Chief (SMF-4J) *for Stephen Ostrodka*  
Superfund Field Services Section *Michael J. Reynolds*  
*6/27/00*

TO: Data User: USEPA

We have reviewed the data for the following case:

SITE NAME: HIMCO DUMP (IN)

CASE NUMBER: 27986 SDG NUMBER: E00FL

Number and Type of Samples: 19 (WATER)

*NRG  
6/27/00*

Sample Numbers: E00FL, E00FF, E00FG-H, E00FJ, E00F4-6, E00FK

Laboratory: PDP E01TP-Q, ECFN2-6, ECFN8-9, ECFPI  
Hrs for Review: 12.5

Following are our findings:

*The data are usable and acceptable with the  
qualifications described in the attached minutes  
Michael J. Reynolds*

SUBJECT: Organic Data Review for Case 27986 ; SDG # E00FL. Volatile and Semivolatile Analyses Using SOW OLC02.1(Low Conc. Analysis).

Attached is the deliverable for Case 27986, SDG E00FL of Volatile and Semivolatile analysis for nineteen (19) water samples. Included in the deliverable is the Manually prepare case narrative. If you have any question please feel free to contact Ira Wilson; 312/353-2947.

SDG: E00FL

Page 2 of 9

CASE: 27986

SITE: HIMCO LANDFILL

This review covers nineteen (19) low concentration water samples, numbered E00FL, E00FF - E00FH, E00FJ, E00FK, E00F4 - E00F6, E01TP, E01TQ, ECFN2 - ECFN9, and ECFP1, were collected on 05/1, 2 and 3/2000. The PDP Analytical Services, of Woodland, TX received the samples on 05/5/2000, in good condition. The samples were analyzed for low concentration VOAs and SVOAs. All samples were analyzed per CLP SOW OLC02.1.

Laboratory Control Samples (LCS) Identified as VLCS65, VLCS66, VLCS02 and VLCS03 (VOAs) and SLCS73 and SLCS76 (SVOAs) were analyzed in place of matrix spike/matrix spike duplicate (MS/MSD) samples.

The VOA samples were analyzed within the holding time of fourteen (14) days for preserved water samples and the SVOA samples were extracted within the required holding time of seven days. The analysis of the semivolatiles were performed within forty (40) days. Therefore, the results for the VOA and SVOA fractions are acceptable.

The reviewer's narrative and data qualifiers are noted in the following pages.

Below is a summary of the out-of-control audits and the possible effect on the data for this case.

**1. HOLDING TIME**

This review covers nineteen (19) low concentration water samples, numbered E00FL, E00FF - E00FH, E00FJ, E00FK, E00F4 - E00F6, E01TP, E01TQ, ECFN2 - ECFN9, and ECFP1, were collected on 05/1, 2, and 3/2000. The PDP Analytical Services, of Woodland, TX received the samples on 05/5/2000 in good condition. The samples were analyzed for low concentration VOAs and SVOAs. All samples were analyzed per CLP SOW OLC02.1.

The VOA samples were analyzed within the holding time of fourteen (14) days for preserved water samples; therefore, the results are acceptable.

The SVOA samples were extracted within the holding time of seven (7) days. The extracts were promptly analyzed within the required 40 days criteria. Therefore; the results are acceptable.

**2. GC/MS TUNING AND GC PERFORMANCE**

GC/MS tuning complied with the mass list and ion abundance criteria for BFB and DFTPP.

**3. CALIBRATION**

Initial and continuing calibration standards of VOA and SVOA were evaluated for the Target Compounds List (TCL) and outliers were recorded on the outlier forms included as a part of this narrative.

**4. METHOD BLANK**

Blanks VBLK65, VBLK66, VBLK02 and VBLK03 are the low concentration water Volatile Method Blanks. The Method Blanks were clean, no TCLs or TICs reported. Blank VHBLK01 is identified as a Holding Blank sample which was also clean.

Page 4 of 9

Blank SBLK44 and SBLK47 are the low conc. water Semivolatile Method Blanks. The Blanks reported no TCLs and no TICs.

Please refer to Form-IV LCV and Form-IV LCSV for a list of associated samples.

**5. SURROGATE RECOVERY AND SYSTEM MONITORING COMPOUNDS**

The low concentration recovery of the system monitoring spiking Compound (BFB = Bromofluorobenzene) for the volatile analysis and the surrogate compounds for the semivolatile analysis met the required QC limits for all samples; therefore, all results are acceptable.

**6 MATRIX SPIKE/MSD SAMPLES**

A Laboratory Control (LCS) Samples identified as VLCS65, VLCS66, VLCS02 and VLCS03 (for volatiles) and SLCS73 and SLCS76 (for semivolatiles) were used in place of a matrix spike/matrix spike duplicate sample for the low concentration analysis. All spike recoveries were within the QC limits; therefore, the results are acceptable.

**7. FIELD BLANK AND FIELD DUPLICATE**

No samples were identified as Trip Blanks, Field Blanks or Duplicates. Results are not qualified based upon the results of the Field Blanks or Duplicates.

**8. INTERNAL STANDARDS**

The internal standard retention times and area counts for the low concentration volatile and semivolatile samples were within the required QC limits; therefore, the results are acceptable.

**9. COMPOUND IDENTIFICATION**

Date: \_\_June 23 , 2000

NARRATIVE

LABORATORY: PDP ANALYTICAL SRVs.  
SDG: E00FL

CASE: 27986  
SITE: HIMCO LANDFILL

Page 5 of 9

Target compounds and TICs were correctly identified by "best fit" library search method.

**10. COMPOUND QUANTITATION AND REPORTED DETECTION LIMITS**

VOA and SVOA Target Compounds (TCLs) and Tentative Identified Compounds (TICs) were properly quantitated; therefore, the results are acceptable.

**11. SYSTEM PERFORMANCE**

GC/MS baseline indicated acceptable performance.

GC baseline for pest/PCB analysis indicated acceptable performance.

**12. ADDITIONAL INFORMATION**

None.

J/R = All positive results are estimated "J" and non-detected results are unusable "R"

- \* = These flags should be applied to the analytes on the sample data sheets.
- # = Minimum Relative Response Factor

## ORGANIC DATA QUALIFIER DEFINITIONS

For the purpose of defining the flagging nomenclature used in this document, the following code letters and associated definitions are provided:

VALUE - when/if the result of a value is greater than or equal to the Contract Required Quantitation Limit (CRQL).

- U Indicates that the compound was analyzed for, but not detected. The sample quantitation limit corrected for dilution and percent moisture is reported.
- J Indicates an estimated value. This flag is used either when estimating a concentration for a tentatively identified compound or when the data indicates the presence of a compound where the result is less than the sample quantitation limit, but greater than zero. The flag is also used to indicate a reported result having an associated QC problem.
- R Indicates the data are unusable. (NOTE: The analyte may or may not be present.)
- N Indicates presumptive evidence of a compound. This flag is only used for a tentatively identified compound, where the identification is based on a mass spectral library search.
- P Indicates a pesticide/Aroclor target analyte when there is greater than 25% difference for the detected concentrations between the two GC columns. The lower of the two results is reported.
- C Indicates pesticide results that have been confirmed by GC/MS.
- B Indicates the analyte is detected in the associated blank as well as in the sample.
- E Indicates compounds whose concentrations exceed the calibration range of the instrument.
- D Indicates an identified compound in an analysis has been diluted. This flag alerts the data user to any differences between the concentrations reported in the two analysis.
- A Indicates tentatively identified compounds that are suspected to be aldol condensation products.
- G Indicates the TCLP Matrix Spike Recovery was greater than the upper limit of the analytical method.
- L Indicates the TCLP Matrix Spike Recovery was less than the lower limit of the analytical method.
- T Indicates the analyte is found in the associated TCLP extraction blank as well as in the sample.

X,Y,Z are reserved for laboratory defined flags.

 LOW CONC. WATER SEMIVOLATILE METHOD BLANK SUMMARY

EPA SAMPLE NO.

SBLK47

Lab Name: PDP ANALYTICAL SERVICES

Contract: 68-D7-0004

Lab Code: PDP

Case No.: 27986

SAS No.: \_\_\_\_\_

SDG No.: E00FL

Lab Sample ID: SVOB720

Date Extracted: 05/09/00

Lab File ID: H1038

Date Analyzed: 05/16/00

Instrument ID: H-HP5973

Time Analyzed: 1917

THIS METHOD BLANK APPLIES TO THE FOLLOWING SAMPLES AND LCS:

|    | EPA<br>SAMPLE NO. | LAB<br>SAMPLE ID | LAB<br>FILE ID | DATE<br>ANALYZED |

**OFFICE MEMORANDUM**

Date: March 26, 2002

To: Jessica Fliss  
Federal Programs Section

Thru: Wilfred Michira  
Steve Buckel

From: Sandra Roberts  
OLQ Chemistry Section

Subject: Analytical Results for Himco Dump  
Elkhart County, Elkhart, Indiana  
Site # 7500044  
Sampled: November 15 and 16, 2000  
Tested by Region 5 Central Regional Laboratories in Chicago, Illinois

The analytical data and results from Himco Dump groundwater wells and residential wells have been validated according to the quality criteria contained in Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, SW-846, Third Edition, Final Updates 1, 2, 2a, and 3, and EPA Drinking Water Standards, 2002. Based on the evaluation, it has been determined that the results are acceptable for use. Reasons that data are qualified as estimated or unusable are explained below. This memorandum should remain attached to the original laboratory reports for reference.

General Comments:

The purpose of this event was to sample the groundwater wells at the Himco Dump and nearby residential wells. The collected samples were analyzed for metals (aluminum, antimony, arsenic, barium, beryllium, cadmium, calcium, chromium, cobalt, copper, lead, magnesium, manganese, mercury, nickel, iron, potassium, selenium, silver, sodium, thallium, vanadium, and zinc), volatile organic compounds (VOCs), semivolatile organic compounds (SVOCs), pesticides, PCBs, and general chemistry parameters (cyanide, chloride, sulfate, and bromide).

Sampling Quality Assurance/Quality Control:

Field documentation included only the chain-of-custody with the field locations in terms of monitoring well and residential water well identifications. Therefore, no site interpretation or evaluation can be made.

Field duplicate samples are used to establish the representativeness of field sampling (i.e., the homogeneity and sample variability). The sample results are considered in good agreement except the SVOC, di-n-butyl phthalate and therefore the di-n-butyl phthalate results are considered estimated.

Field blanks (trip and/or equipment) are used to identify sample contamination resulting from sampling equipment, sample containers, chemical preservatives, and the handling and transportation of samples. A trip blank sample was tested for VOCs only and the results showed no contamination except for 1 ppb of methylene chloride. The field blank or equipment blank showed chloride, sulfate, bromide, calcium, copper, iron, potassium, magnesium, sodium, vanadium, nickel, methylene chloride, chloroform, 1,2-dichloroethane, bromodichloromethane, di-n-butylphthalate, and bis(2-ethylhexyl)phthalate contamination and therefore, the detected results are considered estimated, biased high and possibly reflect cross-contamination.

Laboratory Quality Assurance/Quality Control:

The laboratory performed all quality assurance/quality control (QA/QC) measures necessary to validate the analytical results for this sampling event. According to the Himco Supplemental Ground Water Investigation Field Sampling Plan/Quality Assurance Project Plan, the SW-846 methods were referenced for sample analysis. Based on the SW-846 quality assurance/control and CWA –NPDES SOP criteria, the data are considered acceptable for use.

Based on the validation of the analytical results, the following specific comments and/or qualifications are made regarding the data:

**Metals Analysis**

The water samples were tested for antimony, arsenic, cadmium, lead, selenium, and thallium by GFAA (Graphite Furnace Atomic Absorption) Method. The water samples were also tested for aluminum, barium, beryllium, calcium, chromium, cobalt, copper, iron, potassium, magnesium, manganese, silver, sodium, nickel, vanadium, and zinc by EPA Method 200.7 and mercury by EPA Method 245.2. The matrix spike duplicate sample testing was missing from the quality assurance / quality control information. To determine precision and possible matrix effects, matrix spike, matrix spike duplicate, and sample duplicate testing must be performed.

The 2001SK01S02, 2001SK01S03, and 2001SK01S04 arsenic results are considered estimated and biased slightly high due to continuing calibration verification (CCV) recovery of 111.7%. Note that 2001SK01S02 and 2001SK01S03 are reported diluted and reported as less than values yet above the detection limit.

The 2001SK01S03 lead results are considered estimated and biased slightly high due to continuing calibration verification (CCV) recovery of 110.9%.

The 2001SK01S01 through 2001SK01S04 and 2001SK01D02 thallium results are considered

estimated and biased slightly high due to continuing calibration verification (CCV) recovery of 118.3%. Note that 2001SK01S01 through 2001SK01S04 and 2001SK01D02 are reported diluted and reported as less than values and above the detection limit.

The 2001SK01S01 through 2001SK01S04 and 2001SK01D02 beryllium results are considered estimated and biased high due to contamination from the laboratory preparation blanks.

The 2001SK01S01 and 2001SK01D02 sodium result is considered estimated and biased high due to contamination from the laboratory preparation blanks.

The vanadium and nickel detected results are considered estimated and biased high due to contamination from the laboratory preparation blanks.

### **General Chemistry**

The water samples were tested for cyanide by EPA Method 335.2, and chloride, bromide, and sulfate by EPA Method 300. The matrix spike duplicate sample testing was missing from the quality assurance / quality control information. To determine precision and possible matrix effects, matrix spike, matrix spike duplicate, and sample duplicate testing must be performed.

The 2001SK01S03 bromide result is considered estimated and possibly biased low due to upper calibration standard exceedance.

The 2001SK01S03 cyanide result is considered estimated and biased low since the pH was not adjusted before testing.

### **Volatile Organic Compounds (VOCs)**

The water samples were tested for volatile organic compounds (VOCs) by a CLP method.

The 1,2 dichloroethane detected results are considered estimated and biased high due to out-of-control matrix spike duplicate recovery of 113%. Several other matrix spike duplicate recoveries are also out-of-control for trans-1,3-dichloropropene, 1,1,2-trichloroethane, 1,3-dichloropropane, dibromochloromethane, 1,2 dibromoethane, 1,2,3-trichloropropane and dibromomethane yet in these cases, the results are not considered qualified since the recoveries are biased high and the results are nondetect.

The naphthalene's initial calibration verification and continuing calibration verification are out-of-control yet the results are not considered qualified since the recoveries are biased high and the results are nondetect.

The tentatively identified compound, chlorofluoromethane, results are estimated due to lack of instrument calibration.

Note that all of the 2-chloroethyl vinyl ether results were rejected by the laboratory due to the laboratory's lack of calibration standard solutions.

### **Semivolatile Organic Compounds (SVOCs)**

The water samples were tested for semivolatile organic compounds (SVOCs) by a CLP method.

The di-n-butyl phthalate results are estimated due to a low laboratory control sample recovery of 48%, low laboratory control sample recovery of 56%, and contamination of 4 ppb found in the laboratory preparation blank.

The bis(2-ethylhexyl)phthalate detected results are estimated due to contamination of 3 ppb found in the laboratory preparation blank.

The 2-chlorophenol results are considered estimated due to low matrix spike recovery of 50%, low matrix spike duplicate recovery of 42%, and laboratory control sample duplicate recovery of 80%.

The 3-nitroaniline's initial calibration verification and laboratory control sample recovery of 112% and laboratory control duplicate sample recovery of 132% are out-of-control yet the results are not considered qualified since the recoveries are high and the results are nondetect.

The pentachlorophenol's initial calibration verification, continuing calibration verification, laboratory control sample recovery of 156%, and laboratory control sample duplicate recovery of 184% are out-of-control yet the results are not considered qualified since the recoveries are high and the results are nondetect.

The benzoic acid's initial calibration verification, continuing calibration verification, laboratory control sample recovery of 180%, and laboratory control sample duplicate recovery of 204% are out-of-control yet the results are not considered qualified since the recoveries are high and the results are nondetect.

The hexachlorocyclopentadiene's initial calibration verification, continuing calibration verification, laboratory control sample recovery of 88%, and laboratory control duplicate sample recovery of 88% are out-of-control yet the results are not considered qualified since the recoveries are high and the results are nondetect.

The 3,3-dichlorobenzidine's continuing calibration verification and laboratory control duplicate sample of 112% are out-of-control yet the results are not considered qualified since the recoveries are high and the results are nondetect.

The 4-nitrophenol's continuing calibration verification, matrix spike recovery of 133%, and matrix spike duplicate recovery of 140%, and laboratory control sample recovery of 164% are out-of-control yet the results are not considered qualified since the recoveries are high and the

results are nondetect.

The 2,4-dinitrophenol's initial calibration verification, continuing calibration verification, matrix spike recovery of 667%, laboratory control sample recovery of 640%, and laboratory control sample duplicate recovery of 840% are out-of-control yet the results are not considered qualified since the recoveries are high and the results are nondetect.

Laboratory control sample and laboratory control sample duplicate recoveries are out-of-control for 1,2-dichlorobenzene, benzyl alcohol, 4-methylphenol, bis(2-chloroisopropyl)ether, hexachloroethane, N-Nitro-di-n-propylamine, nitrobenzene, isophorone, 2,4-dimethylphenol, 2,4-dichlorophenol, 1,2,4-trichlorobenzene, 4-chloroaniline, hexachlorobutadiene, 4-chloro-3-methylphenol, 2-methylnaphthalene, 2,4,5-trichlorophenol, 2-aniline, dimethylphthalate, 4-chlorophenyl-phenylether, diethylphthalate, and butylbenzylphthalate yet the results were not considered qualified since the recoveries are high and the results are nondetect.

Laboratory control sample duplicate recoveries are out-of-control for phenol, 2-chlorophenol, 1,3-dichlorobenzene, 1,4-dichlorobenzene, 2-methylphenol, 2-nitrophenol, 2,4,6-trichlorophenol, 2-chloronaphthalene, 2,6-dinitrotoluene, acenaphthene, dibenzofuran, 2,4-dinitrotoluene, fluorene, 4,6-dinitro-2-methylphenol, N-Nitrosodiphenylamine, 4-bromophenyl-phenylether, hexachlorobenzene, pyrene, and chrysene yet the results are not considered qualified since the recoveries are high and the results are nondetect.

The tentatively identified compound results are estimated due to lack of instrument calibration.

Even though the laboratory column was unable to separate the 4-methylphenol and 3-methylphenol compounds, the results are considered not qualified since all of the samples are nondetect.

### **Pesticides and PCBs**

The water samples were tested for Pesticides and PCBs by a CLP method.

The PCB and pesticide results of samples 2001SK01S01, 2001SK01S03, 2001SK01S04 are considered estimated and biased low due to out-of-control surrogate recoveries.

The alpha-BHC, delta-BHC, gamma-chlordane, alpha-chlordane, p,p'-DDE, lindane, aldrin, endosulfan I, dieldrin, and endrin results are considered estimated and biased slightly low due to low recoveries of the quality control check samples.

The calibration verification is out-of-control for methoxychlor, aldrin, and p,p'-DDT yet in these cases, the results are not considered qualified since the recoveries are high and the results are nondetect.

The matrix spike and matrix spike duplicate recoveries are out-of-control for dieldrin and p,p'-

DDT yet in these cases, the results are not considered qualified since the recoveries are high and the results are nondetect.

The laboratory control sample recoveries are out-of-control for BHC (Lindane), dieldrin, endrin, and p,p'-DDT yet in these cases, the results are not considered qualified since the recoveries are high and the results are nondetect.

### Results:

Multiple samples exceeded the Drinking Water Standard Secondary Maximum Contaminant Levels (SMCLs) and Maximum Contaminant Levels (MCLs).

The attached charts list the data, except the pesticides and PCBs, that are qualified and/or exceed the MCLs, and SMCLs. All of the pesticides and PCB results are nondetect and all of the results are considered estimated except the beta-BHC, heptachlor, aldrin, hept epoxide, p,p'-DDT, endrin aldehyde, endosulfan sulfate, methoxychlor, endrin ketone, and aroclor 1242 for samples 2001SK01R01 (equipment blank) and 2001SK01S02 (2<sup>nd</sup> Residential Well).

Two MCLs were exceeded. Benzene concentration exceeded the 5 ppb MCL with 8 ppb of benzene for 2001SK01S03 (MW116A) and 1,2-dichloropropane exceeded the 5ppb MCL with 8 ppb of 1,2-dichloropropane for 2001SK01S02 (2<sup>nd</sup> Residential Well).

Several SMCLs were also exceeded. Total aluminum concentrations exceeded the 50-200 ppb SMCL with 58.2 ppb for 2001SK01S02 (2<sup>nd</sup> Residential Well), 335 ppb for 2001SK01S03 (MW116A), and 112 ppb for 2001SK01S04 (101A). Total iron concentrations exceeded the 300 ppb SMCL with 1840 ppb for 2001SK01S02 (2<sup>nd</sup> Residential Well), 8200 ppb for 2001SK01S03 (MW116A), and 9490 ppb for 2001SK01S04 (101A). Total manganese concentrations exceeded the 50 ppb SMCL with 103 ppb for 2001SK01S01 (1<sup>st</sup> Residential Well), 1250 ppb for 2001SK01S02 (2<sup>nd</sup> Residential Well), 1240 ppb for 2001SK01S03 (MW116A), and 929 ppb for 2001SK01S04 (101A). Sulfate concentration exceeded the 250 ppb SMCL with 1020 ppb for 2001SK01S03 (MW116A).

The VOC, chlorofluoromethane, was detected as a tentatively identified compound (TIC) at 4 ppb for 2001SK01S03 (MW116A) and 4 ppb for 2001SK01S04 (101A). Also, several SVOCs were detected as tentatively identified compounds and unknown compounds with the total concentrations of 235 ppb for the 2001SK01D02 (2<sup>nd</sup> Residential well duplicate), 25 ppb for 2001SK01S03 (MW116A) and 6 ppb for 2001SK01S04 (101A).

### Conclusion

For the overall project goal, the data are acceptable for use. Quarterly sampling and any ongoing remediation should continue to document when samples exceed the MCL, SMCL, and/or action levels. Also, field sheets and a sampling location map should be submitted with future results and the SW-846 methods and criteria listed in the Himco Supplemental Ground Water

Investigation Field Sampling Plan/Quality Assurance Project Plan should be followed in the future.

## CASE NARRATIVE

DATE: December 14, 2000

PROJECT NAME: Himco Landfill - CRL Case #:20010009  
Analysis of Volatile Organic Analytes (VOA)

ANALYST: Nidia Fuentes, Chemist *NF*

REVIEWER: Babu Paruchuri, GC/MS Team Leader *BP*

### I. CASE DESCRIPTION:

The laboratory received seven low water samples (2001SK01S01, S02, S03, S04, R01, R02 and D02) for volatile organic analyte (VOA) analysis which were already acid preserved in the field. These samples were analyzed on 11/22-23/2000 by the CRL Method GCMS023, on instrument #7. In addition to the routine parameters, the lab analyzed the site samples for the following additional site specific compounds: ethyl ether, dichlorofluoromethane, and chlorofluoromethane. Because the latter compound was not readily available at the time of sample analysis, the lab reported estimated concentrations for chlorofluoromethane. The laboratory met sample analysis holding time criteria for all samples. (QC Criteria for water acid preserved sample analysis holding time: 14 days from the date of collection.) These samples were received at the laboratory in good condition.

### II. INSTRUMENT QUALITY CONTROLS:

1. Instrument Performance Check: On each day of analysis, the GC/MS instrument (HP-MSD#7) performance checks were made to determine whether the instrument met the EPA tuning criteria for p-BFB (QC Criteria: Same as the CWA's criteria). No problems were observed.

2. Initial Calibration Check: An acceptable five point initial calibration (IC) curve (QC Criteria for IC: %RSD should be  $\leq 35\%$ ) is required for all target compounds before samples can be analyzed. The lab generated one IC curve on

11/21/2000, having no outliers except naphthalene and 2-chloroethyl vinyl ether. Because the latter compound was not detected in the calibration standards, 2-chloroethyl vinyl ether data were qualified as unusable "R". Also, since naphthalene not was detected in the site samples, its reporting limits were flagged estimated (UJ).

3. Continuing Calibration Check: Two continuing calibrations check (CCC) standards were evaluated to analyze the site samples. The first CCC data generated on 11/22/2000 met the CRL QC requirements for all compounds (QC Criteria for CC: %D should be  $\leq 30\%$ ) except for naphthalene and 2-chloroethyl vinyl ether. The following samples were analyzed by this calibration: 2001SK01S01, S02, D02, S03, S04, R01 and R02. The second CCC generated on 11/24/2000 had two outliers: naphthalene and 2-chloroethyl vinyl ether. The following Samples were analyzed by this CC: 2001SK01S02dil, D02dil, S03dil, S04dil, S02MSdil and S02MSDdil.

4. Internal Standard (IS) Area and Retention Time (RT) Summary: The lab generated data of acceptable quality.

### III. METHOD QUALITY CONTROL:

1. Method Blank Results: On each day of sample analysis, 25-ml of reagent water spiked with internal standards and surrogates was analyzed to check the GC/MS and purge and trap systems for lab contamination. No problems were encountered.

2. Surrogate Spike Compound Results: The surrogate spike compound recovery data were within the CRL's QC limits for all of the site samples.

3. Matrix Spike/Matrix Spike Duplicate (MS/MSD) Results: The laboratory collected site-specific matrix precision and accuracy (P&A) data using the site sample 2001SK01S02. Because the lab has not yet analyzed enough MS and MSD samples to establish QC acceptance criteria, the lab evaluated the MS and MSD sample QC data quality based on QC acceptance criteria established for LCS and LCS duplicates. Please see below.

4. Laboratory Control Sample (LCS): The laboratory analyzed LCS and LCS duplicates and generated data of acceptable quality for the target compounds.

5. Performance Evaluation Sample (PES): Not applicable. QC Criteria for the PES: Control Limits are established by EMSL-LV.

**IV. SAMPLE RESULTS:**

The laboratory generated data of acceptable quality. Some of the field samples, S02, D02, S03 and S04, were diluted and reanalyzed at proper dilutions. The affected compound (ethyl ether and dichlorofluoromethane) data were qualified "D". Chlorofluoromethane result should be considered as an estimated value.

## CRL Data Review Qualification Codes

| QUALIFIER | DESCRIPTION  |
|-----------|--|
| <b>B</b>  | This flag is used when the analyte is found in the associated <u>B</u> lank as well as the sample. It indicates possible blank contamination and warns the user to take appropriate action while assessing the data. See the case narrative for a discussion of common lab contaminants and/or the relative concentration of contamination in the samples and blanks for relevance.  |
| <b>D</b>  | This flag is used when the analyte concentration results from a required <u>D</u> ilution of the sample, extract or digestate.   |
| <b>E</b>  | This flag is used to identify analyte concentrations <u>E</u> xceeding the upper calibration range of the analytical instrument after dilution of the sample, extract or digestate. The reported value is considered to be estimated   |
| <b>J</b>  | This flag is used when the analyte is <u>e</u> stimated due to quality control limit(s) being exceeded. This flag accompanies all GC/MS tentatively identified compounds (TICs). This flag also applies to a suspected, unidentified interference. This flag is placed on affected detected results as well as non-detected (i.e., "U" flagged) results. ( <u>J</u> is the flag used in the Superfund CLP SOW and Data Review Functional Guidelines and is used by CRL for consistency.) |
| <b>M</b>  | This flag is used when the analyte is confirmed to be qualitatively present in the sample, extract or digestate, at or above the CRL <u>M</u> ethod Detection Limit (MDL) but below the CRL reporting limit (RL). This flag applies to all values in this concentration range and indicates the quantitated value is <u>e</u> stimated due to its presence in this concentration range.  |
| <b>N</b>  | This flag applies to GC/MS <u>T</u> entatively Identified Compounds (TICs) that have a mass spectral library match.  |
| <b>Q</b>  | This flag applies to analyte data that are severely estimated due to quality control and/or <u>Q</u> uantitation problems, but are confirmed to be qualitatively present in the sample. <u>N</u> o value is reported with this qualification flag.   |
| <b>R</b>  | This flag applies to analyte data that are <u>R</u> ejected and unusable due to severe quality control, quantitation and/or qualitative identification problems. No other qualification flags are reported for this analyte. <u>N</u> o value is reported with this qualification flag.  |
| <b>U</b>  | This flag is used when the analyte was analyzed but <u>U</u> ndetected in the sample. The CRL RL for the analyte accompanies this flag. As with sample results that are positive, the value is corrected for dry weight, dilution and/or sample weight or volume.  |

## CASE NARRATIVE

DATE: December 18, 2000

PROJECT NAME: HIMCO LANDFILL - CRL Case #: 20010009  
Analysis of Acid/Base/Neutrals  
Organic Analytes (ABN)

ANALYST: Roger Rudinsky, Chemist *RR*

REVIEWERS: Babu Paruchuri, Chemist *BP*

### I. CASE DESCRIPTION:

The laboratory received 8 water samples from the subject site for ABN analysis. In addition to the routine target parameters, the laboratory analyzed the site samples for 2-hydroxybenzothiazole.

The samples were extracted by continuous liquid liquid and analyzed by GC/MS technique.

These samples were received at the laboratory in good condition.

### II. INSTRUMENT QUALITY CONTROLS:

1. Instrument Performance Check: The samples were analyzed on December 4<sup>th</sup>, 15<sup>th</sup> and 16<sup>th</sup>. IPCs using DFTPP were made on GC/MS to determine if EPA tuning criteria were met. The QC criteria are the same as those found in the Clean Water Act (CWA - NPDES SOP). All ions were within specifications.

2. Initial Calibration Check: An acceptable five point initial calibration (IC) curve (QC Criteria for IC: %RSD should be  $\leq 35\%$ ) is required for all target compounds before samples can be analyzed. Two IC curves were generated to analyze the site samples.

The first initial calibration data collected on December 4<sup>th</sup> was acceptable for all of the compounds except hexachlorocyclopentadiene, 3-nitroaniline and 2,4-dinitrophenol.

Two calibration points were dropped for benzoic acid, and pentachlorophenol. One calibration point was dropped for carbazole and 4-nitrophenol.

The Reporting Limits were changed to reflect the change resulting from dropping points.

The second initial calibration data collected on December 15<sup>th</sup> was acceptable for 2-hydroxybenzothiazole.

3. **Continuing Calibration Check:** An acceptable continuing calibration (CC - QC Criteria for CC: %D should be < 20%) is required for all target compounds before samples can be analyzed. Four CC check standards were analyzed to analyze the site samples.

The first continuing calibration data file (1C120402) was acceptable for all of the compounds except benzoic acid.

The second continuing calibration data file (1C120417) was acceptable for all of the compounds except benzoic acid, hexachlorocyclopentadiene, 2,4-dinitrophenol, 4-nitrophenol, pentachlorophenol and 3,3'-dichlorobenzidine.

The third and fourth continuing calibration data files were acceptable for 2-hydroxybenzothiazole.

4. **Internal Standard (IS) Area and Retention Time Summary:**

All samples met the internal standard (IS) area QC requirements. (QC Criteria for IS Area: internal standard areas of the samples should be - 50% to + 200% of the corresponding IS areas of the daily calibration standard).

All samples met the internal standard (IS) RT QC requirements. (QC Criteria for RT: RT of the IS compounds in the samples should be within 30 seconds of the daily calibration standard IS compounds).

**III. METHOD QUALITY CONTROL:**

1. **Method Blank Results:** On the day of extraction, a Lab Blank (reagents spiked with surrogates) was extracted and analyzed to check the extraction apparatus and GC/MS systems for laboratory contamination (see Form I ABN). If TCLs were detected in the Method Blank samples, data for the affected batch of samples were qualified B(B = found in Method Blank) if the same TCLs were also detected in the site samples. The blank contained small amounts of di-n-butyl-phthalate and bis(2-Ethylhexyl)phthalate.

2. **Surrogate Spike Compound Results:** The surrogate spike compound recovery data that was outside the QC limits was

S1 for 2001SK01S04.

No corrective action is taken unless two or more of the surrogates are outside acceptance ranges. In addition two or more of the outliers must be from the same fraction acid or base/neutral for any data qualification to occur. When this happens all detects are flagged with a 'J' and all non-detects with a 'UJ'. The acid surrogates are S1, S2 and S5. In the case where one surrogate is high and one is low and both are from the same fraction only detected compounds are given the "J" flag.

**3. Matrix Spike/Matrix Spike Duplicate (MS/MSD) Results:**

2001SK01S02 was used for MS/MSDs for the water samples.

2-Chlorophenol had low recoveries for both MS and MSD.

4-Nitrophenol had high recoveries for both MS and MSD.

For 4-Nitrophenol any positives for this compound will be qualified with a "J" flag.

For 2-Chlorophenol any non-detects will be give a "UJ" flag in any sample.

2-Hydroxybenzothiazole had recoveries of 104% and 106% with a %RPD of 2% for the MS and MSD samples, respectively.

**4. Laboratory Control Sample (LCS):** On the day of extraction Laboratory Control Samples (LCS and LCS Duplicate) were extracted and analyzed with the site samples.

In keeping with the new QC plan this pair of samples was not used for any data qualification since the MS/MSD appears to be a good indicator of target compound recovery precision.

**5. Performance Evaluation Sample (PES):** Not applicable.

**IV. SAMPLE RESULTS:**

We have discovered that the GC/MS column we are using is not capable of separating 3-methylphenol and 4-methylphenol. We have ordered a new column that will be capable of this for future analysis.

We have noticed that the concentration of one of our surrogates Phenol-D5 in our standard mixes obtained from Supelco is greater now than in previous batches. The concentration of this surrogate in our standard mix is 85

ng/ul now. Previously the concentration was 50 ng/ul.

In almost all cases manual integration was performed for the following reasons:

- (1) The manual integration was performed because the entire compound peak area was not integrated by the software. The spectra of both before and after may or may not be identical depending on co-eluting peaks.
- (2) The software selected the wrong peak for integration. The manual integrations for the initial calibration standards will be found in the City of Pontiac package - data set number 20010007.

In addition to the usual ABN target compounds we analyzed for 2-hydroxybenzothiazole. For this compound the laboratory has not yet conducted method validation studies. Therefore, the site sample data were qualified estimated UJ for non-detects and J for detects.

The laboratory generated data of acceptable quality.

## CRL Data Review Qualification Codes

| QUALIFIER | DESCRIPTION  |
|-----------|--|
| <b>B</b>  | This flag is used when the analyte is found in the associated <u>B</u> lank as well as the sample. It indicates possible blank contamination and warns the user to take appropriate action while assessing the data. See the case narrative for a discussion of common lab contaminants and/or the relative concentration of contamination in the samples and blanks for relevance.  |
| <b>D</b>  | This flag is used when the analyte concentration results from a required <u>D</u> ilution of the sample, extract or digestate.   |
| <b>E</b>  | This flag is used to identify analyte concentrations <u>E</u> xceeding the upper calibration range of the analytical instrument after dilution of the sample, extract or digestate. <u>The reported value is considered to be estimated</u>  |
| <b>J</b>  | This flag is used when the analyte is <u>e</u> stimated due to quality control limit(s) being exceeded. This flag accompanies all GC/MS tentatively identified compounds (TICs). This flag also applies to a suspected, unidentified interference. This flag is placed on affected detected results as well as non-detected (i.e., "U" flagged) results. ( <u>J</u> is the flag used in the Superfund CLP SOW and Data Review Functional Guidelines and is used by CRL for consistency.) |
| <b>M</b>  | This flag is used when the analyte is confirmed to be qualitatively present in the sample, extract or digestate, at or above the CRL <u>M</u> ethod Detection Limit (MDL) but below the CRL reporting limit (RL). This flag applies to all values in this concentration range and indicates the quantitated value is <u>e</u> stimated due to its presence in this concentration range.  |
| <b>N</b>  | This flag applies to GC/MS <u>T</u> entatively Identified Compounds (TICs) that have a mass spectral library match.  |
| <b>Q</b>  | This flag applies to analyte data that are severely estimated due to quality control and/or <u>Q</u> uantitation problems, but are confirmed to be qualitatively present in the sample. <u>No value is reported with this qualification flag.</u>  |
| <b>R</b>  | This flag applies to analyte data that are <u>R</u> ejected and unusable due to severe quality control, quantitation and/or qualitative identification problems. No other qualification flags are reported for this analyte. <u>No value is reported with this qualification flag.</u>   |
| <b>U</b>  | This flag is used when the analyte was analyzed but <u>U</u> ndetected in the sample. The CRL RL for the analyte accompanies this flag. As with sample results that are positive, the value is corrected for dry weight, dilution and/or sample weight or volume.  |

536 SOUTH CLARK STREET

CHICAGO, ILLINOIS 60605

Date: JAN 27 1991

Subject: Review of Region 5 Data for Himco Landfill

From: Monica C. Paguia, Chemist *Monica C. Paguia*  
Region 5 Central Regional Laboratory

To: *Gwen Massenburg*  
*SR-6J*

Attached are the results for Site: Himco Landfill (residential wells)

CRL Data Set Number: SF 2001 0009

for analyses of: Pesticides and PCBs

Results are reported for sample numbers: 2001SKO1S01-S04, 2001SKO1R01, & 2001SKO1D02

Results Status:

- Acceptable for Use
- Data Qualified, but Acceptable for use
- Data Unacceptable for Use

CASE NARRATIVE

DATE: December 15, 2000

PROJECT NAME: Himco Landfill  
Analysis of Pesticides and PCBs

DATA SET NUMBER: 20010009

ANALYST: Monica C. Pagua, Chemist

I. CASE DESCRIPTION:

The laboratory received 6 water samples on 11/17/00 for PCB/pesticides analysis. These water samples, along with the appropriate QC samples, were collected on 11/15 & 11/16/00 and were extracted on 11/20/00. The extraction holding time of 14 days after collection was met for all the samples.

The quality control samples consisted of a method blank (MB), a laboratory control sample and duplicate (LCS/LCS Dup.), a matrix spike and matrix spike duplicate (MS/MSD). The MB and LCS/LCS duplicate were prepared with clean reagent water. The MS/MSD were prepared with aliquot duplicate samples of 2001SK01S02. The LCS, LCS Dup., MS, & MSD were spiked with a pesticide mix spiking solution. No PCB spiking solutions were used. This was done in accordance with CRL policy of alternating PCB and pesticides spiking solutions for the QC samples with each extraction of sample batches.

GC#1 was used for the analysis. The extracts were injected for screening on 11/28/00 and were injected for analysis on 12/01/00. The Sequence Summary Form provides a listing of all the data file names, sample numbers/names and dates/times of injection for all the standards, QC samples and samples on each of the two GC columns. The injection holding time of 40 days after extraction was met for all the samples.

By screening the samples, it was discovered that the samples had neither PCBs nor sulfur in them. Therefore, clean-up of the samples was not necessary. Also, the samples were not analyzed with a 5 point calibration for PCBs. Rather, levels 1 & 2 of Aroclor 1242 were injected and used to update an existing method. Because low levels were of interest and no PCBs were discovered in the screening, the samples were analyzed using a 2 point method (A42W1215.M).

The Standard Operating Procedures (SOPs) that were followed for this analysis are CRL SOP GC001 (GC/EC Analysis) and GC007 (Liquid-liquid extraction).

## II. INSTRUMENT QUALITY CONTROLS:

### 1. Instrument Performance Check:

#### DDT and Endrin Degradation Checks

The CRL QC limit of  $\pm 15\%$  degradation for DDT was met on both columns; endrin passed on column DB-608 but failed on column DB-5. None of the samples were qualified due to these results.

### 2. Initial Calibration Check:

Initial calibration curves were injected on 11/30/00 and generated on 12/13/00. Valid 5 point calibration curves were generated passing CRL calibration acceptance criteria for each pesticide analyte.

### 3. Calibration Verification Standards (CVS):

Calibration verification standards were injected at 12 hours or less intervals within a sequence. CVS results generally passed the CVS CRL QC acceptance criteria. Any results that fell outside of the limits were slightly higher than the limit. This did not have any adverse effect on the samples.

### 4. Retention Time (RT) Summary:

Retention time reproducibility (CVSs vs. initial) was acceptable for all the analytes. The RTs in the CVSs are within  $\pm 0.08$  minutes of the initial calibration.

### 5. QC Check Standards (Accuracy check):

The calibration standards used had been checked against QC check standards obtained from a different source. The QC limit of 80 - 120% recovery was met for most of the analytes. For those that fell below the limit, these analytes were qualified J (estimated)

## III. METHOD QUALITY CONTROL:

### 1. A. Method Blank Results:

The method blank and instrument blank results did not contain target pesticides or PCBs above the detection limit.

### 2. Surrogate Spike Compound Results:

The surrogate recoveries for TCMX generally passed for all of the samples. However, DCB recovery was very low for

samples 2001SK01S01, -S03, & -S04. This is probably due to matrix interferences &/or sample preparation interferences. Results reported from these samples were qualified J (Estimated).

3. Matrix Spike/Matrix Spike Duplicate (MS/MSD) Results:

The MS/MSD were prepared using aliquot duplicate samples of 2001SK01S02 and were spiked with a pesticide spiking solution. No PCB MS/MSD were prepared. Again, this was done in accordance with the CRL policy of the alternate use of pesticide and PCB spiking solutions. Results were acceptable.

4. Laboratory Control Sample (LCS):

The LCS/LCS duplicate were spiked with pesticides. No PCB LCS/LCS Dup. were prepared. Results were acceptable.

IV. **SAMPLE RESULTS:**

There were no pesticides found above the MDL in any of the samples. Therefore, all of the data was qualified U (Undetected) (See Form 1 sample results). Reporting limits were based on the lowest calibration standard. Again, results from 2001SK01S01, -S03 & -S04 were flagged J (Estimated) due to low surrogate recoveries, making results biased low or rather forcing detection limits to be biased high.

The data are qualified but acceptable for use.

The data acquired on GC#1 for these samples were saved in R5CRL\Vol13\PCB\_PEST\MPAGUIA\GC#1\DATA\ [subdirectory name]. The subdirectories are as follows: 112800 and 113000.

## CRL Data Review Qualification Codes

| QUALIFIER | DESCRIPTION  |
|-----------|--|
| <b>B</b>  | This flag is used when the analyte is found in the associated <u>B</u> lank as well as the sample. It indicates possible blank contamination and warns the user to take appropriate action while assessing the data. See the case narrative for a discussion of common lab contaminants and/or the relative concentration of contamination in the samples and blanks for relevance.  |
| <b>D</b>  | This flag is used when the analyte concentration results from a required <u>D</u> ilution of the sample, extract or digestate.   |
| <b>E</b>  | This flag is used to identify analyte concentrations <u>E</u> xceeding the upper calibration range of the analytical instrument after dilution of the sample, extract or digestate. <u>The reported value is considered to be estimated</u>  |
| <b>J</b>  | This flag is used when the analyte is <u>e</u> stimated due to quality control limit(s) being exceeded. This flag accompanies all GC/MS tentatively identified compounds (TICs). This flag also applies to a suspected, unidentified interference. This flag is placed on affected detected results as well as non-detected (i.e., "U" flagged) results. ( <u>J</u> is the flag used in the Superfund CLP SOW and Data Review Functional Guidelines and is used by CRL for consistency.) |
| <b>M</b>  | This flag is used when the analyte is confirmed to be qualitatively present in the sample, extract or digestate, at or above the CRL <u>M</u> ethod Detection Limit (MDL) but below the CRL reporting limit (RL). This flag applies to all values in this concentration range and indicates the quantitated value is <u>e</u> stimated due to its presence in this concentration range.  |
| <b>N</b>  | This flag applies to GC/MS <u>T</u> entatively Identified Compounds that have a mass spectral library match.   |
| <b>Q</b>  | This flag applies to analyte data that are severely estimated due to quality control and/or <u>Q</u> uantitation problems, but are confirmed to be qualitatively present in the sample. <u>No value is reported with this qualification flag.</u>  |
| <b>R</b>  | This flag applies to analyte data that are <u>R</u> ejected and unusable due to severe quality control, quantitation and/or qualitative identification problems. No other qualification flags are reported for this analyte. <u>No value is reported with this qualification flag.</u>   |
| <b>U</b>  | This flag is used when the analyte was analyzed but <u>U</u> ndetected in the sample. The CRL RL for the analyte accompanies this flag. As with sample results that are positive, the value is corrected for dry weight, dilution and/or sample weight or volume.  |

## CASE NARRATIVE

**DATE:** April 5, 2002  
**PROJECT NAME:** Himco Landfill, Analysis of Pesticides and PCBs  
**DATA SET NUMBER:** 20010009  
**ANALYST:** Monica C. Pagua, Chemist *mer*

### **CORRECTION:**

As stated in the original case narrative, these 6 water samples were screened for PCBs prior to analysis. Based on the screening, there were no PCBs found in any of the samples. They were originally analyzed with a pesticide method and an Aroclor 1242 method on GC#1. The samples did not contain any pesticides nor Aroclor 1242.

Level 1 (0.100 ppm) of Aroclors 1016, 1232, 1248, 1254, & 1260 were injected on the same GC at approximately the same time the samples were injected. The sample chromatograms were compared to these aroclor standard chromatograms. The comparisons show that the samples do not contain these aroclors. Aroclor 1221 was not analyzed on GC#1.

Again, there were no pesticides nor PCBs found above the method detection limit (MDL) in any of the samples. Therefore, all of the data was qualified **U** (Undetected)(See Form 1 sample results). Reporting limits were based on the lowest calibration standard. Results from 2001SKO1S01, -S03 & -S04 were flagged **J** (Estimated) due to low surrogate recoveries, making results biased low or rather forcing detection limits to be biased high.

The data are qualified but acceptable for use.

## CRL Data Review Qualification Codes

| QUALIFIER | DESCRIPTION   |
|-----------|---|
| <b>B</b>  | This flag is used when the analyte is found in the associated <u>B</u> lank as well as the sample. It indicates possible blank contamination and warns the user to take appropriate action while assessing the data. See the case narrative for a discussion of common lab contaminants and/or the relative concentration of contamination in the samples and blanks for relevance.   |
| <b>J</b>  | This flag is used when the analyte is <u>estimated</u> due to quality control limit(s) being exceeded. This flag accompanies all GC/MS tentatively identified compounds (TICs). This flag also applies to a suspected, unidentified interference. This flag is placed on affected detected results as well as non-detected (i.e., "U" flagged) results. ( <u>J</u> is the flag used in the Superfund CLP SOW and Data Review Functional Guidelines and is used by CRL for consistency.) |
| <b>M</b>  | This flag is used when the analyte is confirmed to be qualitatively present in the sample, extract or digestate, with a quantity at or above the CRL <u>M</u> ethod Detection Limit (MDL) but below the lowest concentration of the calibration curve. This flag indicates the quantitated value is <u>estimated</u> since it falls below the lowest calibration standard in the calibration curve.   |
| <b>N</b>  | This flag applies to GC/MS <u>T</u> entatively Identified Compounds (TICs) that have a mass spectral library match.   |
| <b>Q</b>  | This flag applies to analyte data that are severely estimated due to quality control and/or <u>Q</u> uantitation problems, but are confirmed to be qualitatively present in the sample. <u>No value is reported with this qualification flag.</u>   |
| <b>R</b>  | This flag applies to analyte data that are <u>R</u> ejected and unusable due to severe quality control, quantitation and/or qualitative identification problems. No other qualification flags are reported for this analyte. <u>No value is reported with this qualification flag.</u>  |
| <b>U</b>  | This flag is used when the analyte was analyzed for but <u>U</u> ndetected in the sample. The CRL RL for the analyte accompanies this flag. When the customer requests CRL to report below our RL down to our MDL, undetected analytes are reported with a "U" code and the MDL. As with sample results that are positive, the value is corrected for dry weight, dilution and/or sample weight or volume.  |

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY

REGION 5 CENTRAL REGIONAL LABORATORY

536 SOUTH CLARK STREET

CHICAGO, ILLINOIS 60605

Date: Dec 10 1990

Subject: Review of Region 5 Data for Himco Dump Code:054J

From: ESAT, Chemist  
Region 5 Central Regional Laboratory

To: Gwen Massenburg  
SR - 6J

Attached are the results for Site: Himco Dump Code:054J

CRL Data Set Number: 20010009

for analyses of: ICP Metals

Results are reported for sample numbers: 2001SK01S01, 2001SK01S02, 2001SK01D02,  
2001SK01S03, 2001SK01S04 and 2001SK01R01

Results Status:

( x ) Acceptable for Use for most Metals

( x ) Data Qualified, but Acceptable for use where flagged "J" due to baseline drift or contamination

( ) Data Unacceptable for Use

Sylvia Griffin  
CRL Data Management Coordinator and Date Received

Date Transmitted: \_\_\_\_\_

Please have the US EPA project leader fill out the customer survey form on the Region 5 Intranet:  
<http://www.r5intra.epa.gov/crl/qa.html>, (← by clicking on this link, or call George Schupp, CRL  
Sample Coordinator, at 3-1226).

Please sign and date this form below and return it with any comments to:

 Charge Number: ESE-51-058  
 Batch ID No.: 20010009  
 Parameter: ICP

ICP NARRATIVE

This narrative covers the analysis of 6 water samples from the named site sampled for ICP metals analysis.

| Sample Nos. | Sample Station ID's | Sample collected | Analysis dates |
|-------------|---------------------|------------------|----------------|
| 2001SK01S01 | S01 - Res Well 1    | 11-15-2000       | 11-22-2000     |
| 2001SK01S02 | S02 - Res Well 2    | 11-15-2000       | 11-22-2000     |
| 2001SK01D01 | D02 - Dup of S02    | 11-15-2000       | 11-22-2000     |
| 2001SK01S03 | MW 116A             | 11-15-2000       | 11-22-2000     |
| 2001SK01S04 | S04/101 A           | 11-15-2000       | 11-22-2000     |
| 2001SK01R01 | Method blank R01    | 11-15-2000       | 11-22-2000     |

Routine CRL hot block (water) digestion procedures were used to prepare the water samples for ICP analysis. The digested samples were analyzed using the Optima 3300 DV ICP unit using analysis run method water\_080300\_ESAT. Optima 3300 DV ICP results were stored to file 20010009 112200.

ICP RUN RESULTS

Analyte mdl's determined and rl values calculated earlier in the year for ESAT analysis work for the Optima 3300 DV were used. The calculated rl values were used in reporting sample analysis results for this data case.

11-28-71

ICP RUN RESULTS - continued

An ambiguously stated flag in SOP HK005 is the "B" flag. Although a "more than 10 times" rule was mentioned for blanks for considering data as useable, it was not clearly stated whether or not the "B" flag should be used. As a matter of fact, to this analyst, from reading the wording used in the SOP the flow or intent seems to imply (but is not specifically stated to do so) to always use the "B" flag regardless of the sample level if a control audit blank is above an MDL level ! This analyst used the "B" flag for those analyte cases where the MDL value was exceeded but the 10 times value was not exceeded.

Also, to better help understand the use of the "B" flag, let it be pointed out to the data user that the "B" flag is by definition a warning flag only. For estimated data, an additional flag (either an "M" or a "J" flag") is used to denote that the flagged result is in fact estimated.

Analysis RUN 1241 - Optima 3300 DV

29 analyte lines out of a possible 78 lines available using the Optim. 3300 DV method were chosen by a plan agreed upon by Dr. J. V. Morris. These are to be used for routine reporting of analyte values that appear in the QA summary reports.

The following analytes will either not be addressed or only minimally mentioned in this case narrative:

- Sn, Tl, As, Se, Sb, Mo, Pb, Cd, Ti, Y, Sr, Li

The following lists the case pertinent out-of-control QC audit check results:

RUN 1241:

|         |               |       |                      |      |

Na589 19.9 % deviation

\* alternate QC audit check used to monitor this analyte

High AQC's: 1<sup>st</sup> Hi AQC: Zn213 - 19.48 % deviation

2nd Hi AQC: Zn213 - 18.89 "

RL check Soln: RL 1:  
(See paragraphs below regarding RL's)

RL 2:

For the rl check audit, the reporting limit (rl) check solution was used for the analysis runs. Since many of the ESAT calculated rl values were close to the CRL rl values, the CRL RL check solution was used as the check solution for the Optima 3300 DV analysis run.

Presently no "control" actions are associated with the observed rl analyte values actually determined during the analysis runs. RL check solution values currently are being analyzed for purposes of generating a benchmark set of values which can be used to monitor the appropriateness of any given RL level of analyte concentration.

11-21-01

Analysis RUN 1241 - Optima 3300 DV (continued)

As, Sb; Cd, Pb, Se, and Tl sample results were not reported by ICP; see GFAA results for these analytes.

For Al, the sample result for 2001SK01S01 was flagged "M" since it had a result between the MDL and the RL value and it is estimated because of this.

For Be, sample results for 2001SK01S01, S02, and D02 were flagged "M" since they had a result between the MDL and the RL value and they are estimated because of this. Sample results for 2001SK01S01, S02, D02, S03, and S04 were flagged "B" indicating they may have been affected by possible contamination indicated by blank analysis data. The sample results for 2001SK01S03 and S04 were also flagged "J" indicating possible high bias due to the blank contamination just noted and are estimated.

For Co, sample results for 2001SK01S02 and D02 were flagged "M" since they had a result between the MDL and the RL value and they are estimated because of this.

For Cu, sample results for 2001SK01R01, S02, and D02 were flagged "M" since they had a result between the MDL and the RL value and they are estimated because of this.

For Fe, the sample result for 2001SK01R01 was flagged "M" since it had a result between the MDL and the RL value and it is estimated because of this.

For Ni, the sample result for 2001SK01R01 was flagged "M" since it had a result between the MDL and the RL value and it is estimated because of this. Sample results for 2001SK01R01, S01, S02, D02, S03, and S04 were flagged "B" indicating they may have been affected by possible contamination indicated by blank analysis data. Sample results for 2001SK01S01, S02, D02, S03, and S04 were also flagged "J" indicating possible high bias due to the blank contamination just noted and are estimated.

For K, the sample result for 2001SK01R01 was flagged "M" since it had a result between the MDL and the RL value and it is estimated because of this.

11-28-11

Analysis RUN 1241 - Optima 3300 DV (continued)

For Na, the sample result for 2001SK01R01 was flagged "B" indicating it may have been affected by possible contamination indicated by blank analysis data. This sample result was also flagged "J" indicating possible high bias due to the blank contamination just noted and is estimated. The final mid range QC check standard value exceeded upper limit criteria but the high QC check values were within limits. Only the sample result for 2001SK01R01 would be significantly affected because of possible high bias; the remaining Na sample results are usable.

For V, sample results for 2001SK01R01, S01, S02, D02, and S04 were flagged "M" since they had a result between the MDL and the RL value and they are estimated because of this. Sample results for 2001SK01R01, S01, S02, D02, S03, and S04 were flagged "B" indicating they may have been affected by possible contamination indicated by blank analysis data. The sample result for 2001SK01S03 was also flagged "J" indicating possible high bias due to the blank contamination just noted and is estimated.

For Zn, sample results for 2001SK01S01, S02, D02, and S04 were flagged "M" since they had a result between the MDL and the RL value and they are estimated because of this.

Other Comments

Low levels of Ca, Cu, Fe, Mg, Ni, K, Na, and V were found in the field blank (sample 2001SK01R01). Analysis of the undigested field blank sample indicated the presence of Ca, Cu, Mg, Ni, Na, and V. For Fe and K the levels were low enough as to not significantly affect the remaining sample results for these analytes.

Samples 2001SK01S01 and D01 were designated as field duplicates; the analyte values correlate well.

Per discussion with Dr. J. V. Morris, no dilutions were made because of current ambiguities in the CRL Metals 003 SOP regarding upper limits of linearity for analytes such as Ca, Mg, and Na sample results.

R5CRL Files

The following pathways were used for storing analysis information to the R5CRL file server for the this data set:

## CRL Data Review Qualification Codes

| QUALIFIER | DESCRIPTION  |
|-----------|--|
| B         | This flag is used when the analyte is found in the associated <u>B</u> lank as well as the sample. It indicates possible blank contamination and warns the user to take appropriate action while assessing the data. See the case narrative for a discussion of common lab contaminants and/or the relative concentration of contamination in the samples and blanks for relevance.  |
| D         | This flag is used when the analyte concentration results from a required <u>D</u> ilution of the sample, extract or digestate.   |
| E         | This flag is used to identify analyte concentrations <u>E</u> xceeding the upper calibration range of the analytical instrument after dilution of the sample, extract or digestate. The reported value is considered to be estimated   |
| J         | This flag is used when the analyte is <u>e</u> stimated due to quality control limit(s) being exceeded. This flag accompanies all GC/MS tentatively identified compounds (TICs). This flag also applies to a suspected, unidentified interference. This flag is placed on affected detected results as well as non-detected (i.e., "U" flagged) results. ( <u>J</u> is the flag used in the Superfund CLP SOW and Data Review Functional Guidelines and is used by CRL for consistency.) |
| M         | This flag is used when the analyte is confirmed to be qualitatively present in the sample, extract or digestate, at or above the CRL <u>M</u> ethod Detection Limit (MDL) but below the CRL reporting limit (RL). This flag applies to all values in this concentration range and indicates the quantitated value is <u>e</u> stimated due to its presence in this concentration range.  |
| N         | This flag applies to GC/MS <u>T</u> entatively Identified Compounds (TICs) that have a mass spectral library match.  |
| Q         | This flag applies to analyte data that are severely estimated due to quality control and/or <u>Q</u> uantitation problems, but are confirmed to be qualitatively present in the sample. <u>No value is reported with this qualification flag.</u>  |
| R         | This flag applies to analyte data that are <u>R</u> ejected and unusable due to severe quality control, quantitation and/or qualitative identification problems. No other qualification flags are reported for this analyte. <u>No value is reported with this qualification flag.</u>   |
| U         | This flag is used when the analyte was analyzed but <u>U</u> ndetected in the sample. The CRL RL for the analyte accompanies this flag. As with sample results that are positive, the value is corrected for dry weight, dilution and/or sample weight or volume.  |

Method: GFAA for Water  
Site: Himco Dump  
Date: December 11, 2000  
Prepared by: Stephen Connet

TDF: 5104-308  
PWO: ESE51058  
WAD: 05-00-4-04  
Data Set: 20010009

NARRATIVE

Six (6) water samples from the Himco Dump site [2001SK01S01(RES WELL 1), S02 (RES WELL 2), D02 (DUPLICATE OF S02), S03 (MW116A), S04 (101A), R01 (Method Blank)] were collected on November 15-16, 2000 and were received properly preserved by CRL on November 17, 2000. The samples were submitted to ESAT for analysis of antimony, arsenic, cadmium, lead, selenium, and thallium by GFAA.

The samples were digested following standard CRL 200.2 hot block water digestion protocols on November 20, 2000 (digestion batch 1241). Analyses were performed using 200.9 methods on the SIMAA 6000 using multi-element programs. Samples from SF20010010 (digestion batch 1245) were analyzed in the same analytical runs. Background interferences present in the thallium analyses required dilutions to obtain acceptable results.

All QC were within limits; all sample results are acceptable.

Non-detect results are reported to the reporting limit (RL). Results between the method detection limit (MDL) and the RL are reported as the instrument value with an "M" flag. Where appropriate, reported values are dilution corrected and results are flagged "D".

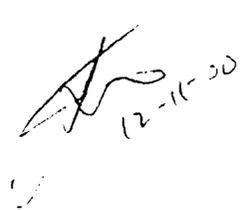

Analytical results were stored in the following database files:

H:\r5crl\vol3\metals\sconnet\20010009\6000-SbTl\120400 and \120500 for antimony and thallium,  
H:\r5crl\vol3\metals\sconnet\20010009\6000-AsSe\120600A and \120700 for arsenic and selenium,  
H:\r5crl\vol3\metals\sconnet\20010009\6000-CdPb\120700A and \121100 for cadmium and lead,  
H:\r5crl\vol3\metals\sconnet\20010009\6000-Tl\120600 for thallium.

This narrative and the Results/QC Summary spreadsheet are stored in:

H:\r5crl\vol3\metals\sconnet\20010009\Reports\GFAA Narrative.wpd  
H:\r5crl\vol3\metals\sconnet\20010009\Reports\QCReport.wk4

Since RLIMS was unavailable, the AA metals analysis results are reported in a Lotus spreadsheet only. Time will be necessary in the future to enter all analysis results into RLIMS.

| QUALIFIER | DESCRIPTION   |
|-----------|---|
| B         | This flag is used when the analyte is found in the associated <u>B</u> lank as well as the sample. It indicates possible blank contamination and warns the user to take appropriate action while assessing the data. See the case narrative for a discussion of common lab contaminants and/or the relative concentration of contamination in the samples and blanks for relevance.   |
| D         | This flag is used when the analyte concentration results from a required <u>D</u> ilution of the sample, extract or digestate.  |
| E         | This flag is used to identify analyte concentrations <u>E</u> xceeding the upper calibration range of the analytical instrument after dilution of the sample, extract or digestate. The reported value is considered to be <u>estimated</u> .   |
| J         | This flag is used when the analyte is <u>estimated</u> due to quality control limit(s) being exceeded. This flag accompanies all GC/MS tentatively identified compounds (TICs). This flag also applies to a suspected, unidentified interference. This flag is placed on affected detected results as well as non-detected (i.e., "U" flagged) results. ( <u>J</u> is the flag used in the Superfund CLP SOW and Data Review Functional Guidelines and is used by CRL for consistency.) |
| M         | This flag is used when the analyte is confirmed to be qualitatively present in the sample, extract or digestate, at or above the CRL <u>M</u> ethod Detection Limit (MDL) but below the CRL reporting limit (RL). This flag applies to all values in this concentration range and indicates the quantitated value is <u>estimated</u> due to its presence in this concentration range.  |
| N         | This flag applies to GC/MS <u>T</u> entatively Identified Compounds (TICs) that have a mass spectral library match.   |
| Q         | This flag applies to analyte data that are severely estimated due to quality control and/or <u>Q</u> uantitation problems, but are confirmed to be qualitatively present in the sample. <u>No value is reported with this qualification flag.</u>   |
| R         | This flag applies to analyte data that are <u>R</u> ejected and unusable due to severe quality control, quantitation and/or qualitative identification problems. No other qualification flags are reported for this analyte. <u>No value is reported with this qualification flag.</u>  |
| U         | This flag is used when the analyte was analyzed but <u>U</u> ndetected in the sample. The CRL RL for the analyte accompanies this flag. As with sample results that are positive, the value is corrected for dry weight, dilution and/or sample weight or volume.   |

Site: Himco Dump  
Date: December 1, 2000  
Prepared by: Stephen Connet

TDF: 5104-308  
PWO: ESE51058  
WAD: 05-00-4-04  
Data Set: 20010009

NARRATIVE

Six (6) water samples from the Himco Dump site [2001SK01S01 (RES WELL 1), S02 (RES WELL 2), D02 (DUPLICATE OF S02), S03 (MW116A), S04 (.01A), R01 (Method Blank)] were collected on November 15-16, 2000 and were received properly preserved by CRL on November 17, 2000. The samples were assigned to ESAT for mercury analysis.

Due to continuing problems with the autoprep station, the samples were manually digested with samples from data set 20010010 on November 29, 2000. Hydroxylamine was added and the samples analyzed on November 30, 2000. All digestion tubes were capped during digestion.

Non-detect results are reported to the reporting limit (RL).

All QC audits were in control; all sample results are acceptable.

This narrative, the instrument run file, QC summary form and results spreadsheet are stored in:

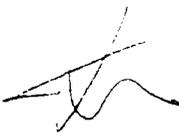

I:\r5crl\vol1\Min\_nut\Sconnet\PSAMercury\HgWATER\20010009\20010009\_nar.wpd

PWO: ESE51058  
WAD: 05-00-4-04  
Data Set: 20010009

NARRATIVE

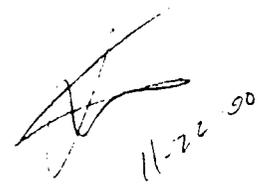

Six (6) water samples from the Himco Dump site [2001SK01S01(RES WELL 1), S02 (RES WELL 2), D02 (DUPLICATE OF S02), S03 (MW116A), S04 (101A), R01 (Method Blank)] were collected on November 15-16, 2000 and were received by CRL on November 17, 2000. All samples except S03 were pH >12, which was pH 10. Distillation and analysis were performed on S03 without adjustment to the pH. The samples were assigned to ESAT for cyanide analysis.

The samples were checked with lead acetate and potassium iodide starch papers with negative results. The samples were distilled using the MIDI distillation method on November 21, 2000. The samples were analyzed on November 21, 2000 for cyanide using a Lachat QuickChem AE Autoanalyzer according to CRL methods. The samples were analyzed within the 14-day holding time limit.

All QC audits were in control: all sample results except S03, which is estimated due to a possible low bias, are acceptable. A control sample was diluted 1:1, distilled and analyzed with the sample batch; no criteria have been established for the sample. All results are reported to the reporting limit (8 ug/L).

The narrative, instrument run file, QC summary report and Results spreadsheet are stored in:

**ANALYSIS CASE NARRATIVE**

Six (6) routine water samples were collected for the above study between 11/15/2000 and 11/16/2000. The samples arrived at the Central Regional Laboratory (CRL) on 11/17/2000. CRL sample identification numbers (CRL Sample ID) were assigned to the samples. The sample descriptions or station numbers were obtained from the Analysis Request Form (ARF). The following samples were received for analysis;

| CRL Sample ID | Sample Description              |
|---------------|---------------------------------|
| 2001SK01S01   | 1 <sup>st</sup> RES WELL        |
| 2001SK01R01   | METHOD BLANK                    |
| 2001SK01S02   | 2 <sup>nd</sup> RES WELL MS/MSD |
| 2001SK01D02   | DUPLICATE                       |
| 2001SK01S03   | MW116A                          |
| 2001SK01S04   | 101A                            |

Samples were checked out for bromide, sulfate, and chloride analysis from the CRL sample custodian on 12/12/2000. The samples were properly preserved by refrigeration. They were transferred to the Analytical and Inorganic (A&I) laboratory section of the CRL, and kept in a sample storage refrigerator until all other required analyses were completed.

**SAMPLE ANALYSIS:**

All samples were analyzed for bromide, sulfate and chloride using CRL Standard Operating Procedure (CRL.SOP) AIG045 (Method reference 300 A & B, EPA/600/R-93-100). No additional sample preparation was necessary. The instrument was calibrated on 12/13/2000, and samples analysis was completed between 12/13-14/2000. Analyses were completed within the required holding times.

**QUALITY CONTROL (QC):**

Analysis results were evaluated using the QC requirements of CRL.SOP AIG045 (Method reference 300 A & B, EPA/600/R-93-100). Required quality control criteria for the laboratory, method, and system performance audits were evaluated and determined to be within the limits with the following exception.

**Bromide:** The concentrations of bromide found in sample 2001SK01S03 (3.75 mg Br/L), exceeded the upper calibration standard (2.0 mg Br/L). This was not detected in time for the analysis to be repeated within the holding time. A "J" flag is applied to the bromide result for

**ANALYSIS CASE NARRATIVE**

sample 2001SK01S03. Bromide concentrations in this sample should be considered estimated. A review of the peak areas indicated that the results were within the instrument linear range for the low-level calibration. The data is acceptable for use with qualification as noted.

**SAMPLE RESULTS AND REPORTING:**

***Sulfate and Chloride:*** A "U" flag was applied to sulfate and chloride results for sample 2001SK01R01. Sulfate and chloride concentrations in the sample were found to be below detection. "D" flags were assigned to all remaining sulfate and chloride results. Assay concentrations exceeded the upper calibration standard and sample dilutions were required.

***Bromide:*** "U" flags were applied to bromide results for samples 2001SK01R01 and 2001SK01S02. Bromide concentrations found in those samples were below detection. "M" flags were applied to bromide results for samples 2001SK01S01, D02, and S04. The concentrations of bromide in those samples were found to be above detection but below the reporting limit. A "J" flag was applied to bromide result for sample 2001SK01S03.

A code defining all flags is attached with the data transmittal form.

**MANUAL PEAK INTEGRATION:**

No manual peak integration was used to process the results.

**ELECTRONIC DATA:**

Electronic data are archived in;

## ATTACHMENT 1

## CRL Data Review Qualification Codes

| QUALIFIER | DESCRIPTION  |
|-----------|--|
| B         | This flag is used when the analyte is found in the associated <u>B</u> lank as well as the sample. It indicates possible blank contamination and warns the user to take appropriate action while assessing the data.   |
| D         | This flag is used when the analyte concentration results from a required <u>D</u> ilution of the sample, extract or digestate.   |
| E         | This flag is used to identify analyte concentrations <u>E</u> xceeding the upper calibration range of the analytical instrument after dilution of the sample, extract or digestate. <u>The reported value is considered to be estimated.</u>   |
| J         | This flag is used when the analyte is confirmed to be qualitatively present in the sample, extract or digestate, at or above the CRL reporting limit (RL) but the quantitated value is <u>estimated</u> due to quality control limit(s) being exceeded. This flag accompanies all GC/MS tentatively identified compounds (TICs). This flag also applies to a suspected, unidentified interference. ( <u>J</u> is the flag used in the Superfund CLP SOW and Data Review Functional Guidelines and is used by CRL for consistency.) |
| M         | This flag is used when the analyte is confirmed to be qualitatively present in the sample, extract or digestate, at or above the CRL <u>M</u> ethod Detection Limit (MDL) but below the CRL reporting limit (RL). This flag applies to all values in this concentration range and indicates the quantitated value is <u>estimated</u> due to its presence in this concentration range.   |
| N         | This flag applies to GC/MS TICs that have <u>N</u> o mass spectral library match.  |
| Q         | This flag applies to analyte data that are severely estimated due to quality control and/or <u>Q</u> uantitation problems, but are confirmed to be qualitatively present in the sample. <u>No value is reported with this qualification flag.</u>  |
| R         | This flag applies to analyte data that are <u>R</u> ejected and unusable due to severe quality control, quantitation and/or qualitative identification problems. No other qualification flags are reported for this analyte. <u>No value is reported with this qualification flag.</u>   |
| U         | This flag is used when the analyte was analyzed but <u>U</u> ndetected in the sample. The CRL RL for the analyte accompanies this flag. As with sample results that are positive, the value is corrected for dry weight, dilution and/or sample weight or volume.  |

| 191-24-2-----  | Benzo(g,h,i)perylene       | 5                       | U |

(1) - Cannot be separated from Diphenylamine

LOW CONC. WATER SEMIVOLATILE ORGANICS ANALYSIS DATA SHEET

1LCC

EPA SAMPLE NO.

SLCS76 ✓

Lab Name: PDP ANALYTICAL SERVICES

Contract: 68-D7-0004

Lab Code: PDP

Case No.: 27986

SAS No.: \_\_\_\_\_

SDG No.: E00FL

Lab Sample ID: SVOL608

Date Received: \_\_\_\_\_

Lab File ID: H1039

Date Extracted: 05/09/00

Sample Volume: 1000 (mL)

Date Analyzed: 05/16/00

Concentrated Extract Volume: 1000 (uL)

Dilution Factor: 1.0

Injection Volume: 1 (uL)

| CAS NO.        | COMPOUND                   | CONCENTRATION<br>(ug/L) | Q |
|----------------|----------------------------|-------------------------|---|
| 51-28-5-----   | 2,4-Dinitrophenol          | 20                      | U |
| 100-02-7-----  | 4-Nitrophenol              | 20                      | U |
| 132-64-9-----  | Dibenzofuran               | 5                       | U |
| 121-14-2-----  | 2,4-Dinitrotoluene         | 11                      |   |
| 84-66-2-----   | Diethylphthalate           | 13                      |   |
| 7005-72-3----- | 4-Chlorophenyl-phenylether | 5                       | U |
| 86-73-7-----   | Fluorene                   | 5                       | U |
| 100-01-6-----  | 4-Nitroaniline             | 20                      | U |
| 534-52-1-----  | 4,6-Dinitro-2-methylphenol | 20                      | U |
| 86-30-6-----   | N-Nitrosodiphenylamine (1) | 12                      |   |
| 101-55-3-----  | 4-Bromophenyl-phenylether  | 5                       | U |
| 118-74-1-----  | Hexachlorobenzene          | 12                      |   |
| 87-86-5-----   | Pentachlorophenol          | 20                      | U |
| 85-01-8-----   | Phenanthrene               | 5                       | U |
| 120-12-7-----  | Anthracene                 | 5                       | U |
| 84-74-2-----   | Di-n-butylphthalate        | 5                       | U |
| 206-44-0-----  | Fluoranthene               | 5                       | U |
| 129-00-0-----  | Pyrene                     | 5                       | U |
| 85-68-7-----   | Butylbenzylphthalate       | 5                       | U |
| 91-94-1-----   | 3,3'-Dichlorobenzidine     | 5                       | U |
| 56-55-3-----   | Benzo(a)anthracene         | 5                       | U |
| 218-01-9-----  | Chrysene                   | 5                       | U |
| 117-81-7-----  | bis(2-Ethylhexyl)phthalate | 5                       | U |
| 117-84-0-----  | Di-n-octylphthalate        | 5                       | U |
| 205-99-2-----  | Benzo(b)fluoranthene       | 5                       | U |
| 207-08-9-----  | Benzo(k)fluoranthene       | 5                       | U |
| 50-32-8-----   | Benzo(a)pyrene             | 15                      |   |
| 193-39-5-----  | Indeno(1,2,3-cd)Pyrene     | 5                       | U |
| 53-70-3-----   | Dibenz(a,h)anthracene      | 5                       | U |
| 191-24-2-----  | Benzo(g,h,i)perylene       | 5                       | U |
